With the rapid growth of computer and communication technologies, the creation, modification and distribution of digital multimedia information have become easier than ever. Such multimedia information includes still images, video, audio, texts and artifacts in virtual space. The efficient storage of valuable information and rapid access to it is crucial to all modern organizations. This proceedings volume consists of papers by researchers and academicians which explore the various aspects of the digital media information base. A special emphasis is placed on new database system technologies. *São Francisco Craton, Eastern Brazil*

Recent technological progress in computer science, Web technologies,

and the constantly evolving information available on the Internet has drastically changed the landscape of search and access to information. Current search engines employ advanced techniques involving machine learning, social networks, and semantic analysis. *Next Generation Search Engines: Advanced Models for Information Retrieval* is intended for scientists and decision-makers who wish to gain working knowledge about search in order to evaluate available solutions and to dialogue with software and data providers. The book aims to provide readers with a better idea of the new trends in applied research. *Les Alchandreana primitifs* Toronto ; Buffalo : University of Toronto Press
This study investigates the place of the

royal court and the operation of patronage in several European kingdoms in the early Middle Ages. It seeks to identify the roots of later medieval developments, and especially of the Carolingian Renaissance, in the centuries immediately succeeding the period of Roman rule.

Studied almost exclusively as a literary humanist, Nicolas de Clamanges (ca. 1363/1364-1437) was closely involved in the Great Western Schism, French humanism, politics at the University of Paris, and Church reform. Far more than an elegant writer, this Parisian scholar and sometime papal secretary was an

important but until now unjustly neglected religious reformer. In Part One of this volume, Christopher M. Bellitto presents a biography of Clamanges' life and a survey of his writings within the multiple contexts in which he operated: schism, Hundred Years' War, Parisian humanism, French civil war. It places his literary images of a troubled Church within the framework of his ideas of the humanism of reform, identifying his great debt to Pauline and Augustinian ideas of the interplay of divine and human activities. Part Two explores Clamanges' normative emphasis on personal reform, which was essentially a *via purgativa* that drew on monastic piety and late medieval spirituality, especially the imitation of Christ in the Modern Devotion. His was an inside-out

reform that radiated from the heart of the individual Christian through the rest of the Church. In Clamanges' writings, we he

This book is based on a study of the peculiarities of one of the earliest Qur'anic manuscripts preserved (the codex Parisino-petropolitanus, 7th century); it provides an analysis of the conditions of the written transmission of the Qur'an and reconsiders the constitution of the canonical version. Ce livre, qui étudie les particularités d'un des plus anciens manuscrits coraniques conservés (le codex Parisino-petropolitanus, 7e siècle), analyse les conditions de la transmission écrite du Coran et reconsidère la façon dont s'est

constituée la version canonique.

Culture and Dialogue is an international peer-reviewed journal of cross-cultural philosophy and the arts that is published semi-annually both in print and electronically. The Journal seeks to encourage and promote research in the type of philosophy and theory that sees dialogue as a fundamental ingredient of cultural formations, that is to say the ways cultures become apparent and ultimately identifiable.

This volume contains a selection of fifteen papers presented at three consecutive meetings of the Society for Pidgin and Creole Linguistics, held in

Washington, D.C. (January 2001); Coimbra, Portugal (June 2001); and San Francisco (January 2002). The fifteen articles offer a balanced sampling of creolists' current research interests. All of the contributions address questions directly relevant to pidgin/creole studies and other contact languages. The majority of papers address issues of morphology or syntax. Some of the contributions make use of phonological analysis while others study language development from the point of view of acquisition. A few papers examine discourse strategies and style, or broader issues of social and ethnic identity. While this array of topics and perspectives is reflective of the diversity of the field, there is also much common ground in that all of the papers adduce

solid data corpora to support their analyses. The range of languages analyzed spans the planet, as approximately twenty contact varieties are studied in this volume.

The region of the São Francisco river valley in eastern Brazil encompasses two main components of the geologic

framework of the South American continent: the São Francisco craton and its marginal orogenic belts. Cratons, as the oldest, differentiated and relatively stable pieces of the continental lithosphere, preserve a substantial part of the Earth's memory. Orogenic belts, on the other hand, record collisional processes that occurred during a limited time span. Because of their topographic relief, mountain belts developed along craton margins provide however access to rock successions not exposed in the low lands of the adjacent cratons. The combination of geologic information obtained in cratonic domains and their marginal orogenic belts thus form the basis for deciphering substantial periods of Earth's history. Corresponding to the most intensively studied portion of the

Precambrian nucleus of the South American plate, the São Francisco craton and its margins host a rock record that spans from the Paleoproterozoic to the Cenozoic. Precambrian sedimentary successions that witness ancient Earth processes - many of them of global significance - are especially well preserved and exposed in this region. With all these attributes the São Francisco craton together with its fringing orogenic belts can be viewed as a 'continent within a continent' or a 'continent in miniature'.

Setting out the historical national and religious characteristics of the Italians as they impact on the integration within the European Union, this study makes note of the two characteristics that have an

adverse effect on Italian national identity: cleavages between north and south and the dominant role of family. It discusses how for Italians family loyalty is stronger than any other allegiance, including feelings towards their country, their nation, or the EU. Due to such subnational allegiances and values, this book notes that Italian civic society is weaker and engagement at the grass roots is less robust than one finds in other democracies, leaving politics in Italy largely in the hands of political parties. The work concludes by noting that EU membership, however, provides no magic bullet for Italy: it cannot change internal cleavages, the Italian worldview, and family values or the country's mafia-dominated power matrix, and as a result, the underlying

absence of fidelity to a shared polity—Italian or European—leave the country as ungovernable as ever. *Bibliotheca Americana* John Benjamins Publishing
Focusing on methodologies, applications and challenges of textual data analysis and related fields, this book gathers selected and peer-reviewed contributions presented at the 14th International Conference on Statistical Analysis of Textual Data (JADT 2018), held in Rome, Italy, on June 12-15, 2018. Statistical analysis of textual data is a multidisciplinary field of research that has been mainly fostered by statistics, linguistics, mathematics and computer science. The respective sections of the book focus on techniques, methods and models for text analytics, dictionaries

and specific languages, multilingual text analysis, and the applications of text analytics. The interdisciplinary contributions cover topics including text mining, text analytics, network text analysis, information extraction, sentiment analysis, web mining, social media analysis, corpus and quantitative linguistics, statistical and computational methods, and textual data in sociology, psychology, politics, law and marketing.

"Clarissa" on the Continent defines and explores two strategies of literary translation—creative vs. preservative and strong vs. weak—as they transform one of the most influential English novels. Thomas Beebee compares the two opposing strategies as they influence the French translation of Clarissa by the novelist Antione François de Prévost and the German translation by the Göttingen Orientalist Johann David Michaelis, and in doing so he demonstrates that each translator found authority for his procedure within the text itself. Each translation is also examined in light of Richardson's other writings and placed in its literary and cultural context. This study uses

translations in order to interpret Clarissa, to show how the basis for the novel's reception on the Continent was laid, and to explore the differences and interactions among three literary and cultural systems of the eighteenth century. The close examination of these two important translations enable the formulation of not only a theory of creative vs. preservative translation but also the interconnections between literary theory and translation theory. Beebee also looks at later translations of Clarissa as products of literary and historical change and at Prévostian strategies of the novel.

This posthumous work by Jacques Arends offers new insights into the emergence of the creole languages of Suriname including Sranantongo or Suriname Plantation Creole, Ndyuka, and Saramaccan, and the sociohistorical context in which they developed.

Drawing on a wealth of sources including little known historical texts, the author points out the relevance of European settlements prior to colonization by the English in 1651 and concludes that the

formation of the Surinamese creoles goes back further than generally assumed. He provides an all-encompassing sociolinguistic overview of the colony up to the mid-19th century and shows how ethnicity, language attitude, religion and location had an effect on which languages were spoken by whom. The author discusses creole data gleaned from the earliest sources and interprets the attested variation. The book is completed by annotated textual data, both oral and written and representing different genres and stages of the Surinamese creoles. It will be of interest to linguists, historians, anthropologists, literary scholars and anyone interested in Suriname.

The study of writing and reading in the middle ages is not only of direct importance to the understanding of its culture but also fascinating in its own right. *Scribes, Scripts and Readers* brings together fifteen essays by M.B. Parkes, the author of *English Cursive Book Hands, 1250-1500*. Centred on England and her direct neighbours, they deal with scribes and schools of writing, scribal techniques, and wider questions of communication in written language, literacy and the availability of books. This is a book of interest not only to palaeographers but also to historians,

linguists, literary scholars and librarians.

Every researcher or diagnostician working with reptiles has faced the challenge of identifying reptile hemoparasites and then determining whether they are of importance or merely incidental. Another challenge is how to easily find the information required to make the proper identification. A distillation of knowledge from world-renowned expert Sam R. Telford, Jr, *Hemoparasites of the Reptilia: Color Atlas and Text* provides a comprehensive compilation of information on how to differentiate between the myriad species of reptile

hemoparasites. The atlas provides diagnoses for 262 species of plasmodiids, hemogregarines, hemococcidians, trypanosomes, and leishmanias, including descriptions of eight new species or new taxonomic designations. It also discusses lesser known groups, such as piroplasms, rickettsiae, chlamydia, and erythrocytic viruses. Each genus and many species are represented among the 166 taxa illustrated in color. The species accounts contain host and geographic distribution, with precise localities when possible, prevalence, life cycles and vectors when known, effects upon the host, and ecology of the host-parasite relationship, morphological variation, and an exhaustive bibliography. The book also includes an illustrated key showing

diagnostic characters. Telford draws on his 45 years of experience and his personal collection, considered the world's most complete, to provide information on the morphology of the unicellular parasites of reptilian blood. He includes information from hard-to-find original papers and articles from sources throughout the world. The

illustrated key and photomicrographs from Telford's collection make identifying species quicker and easier.
