This dictionary presents a balanced and objective view of South Korea, providing a long perspective and covering varied aspects of South Korean life. Domestic, political, and social events, foreign affairs, economic and cultural developments, and the men and women who have influenced the country's history are reviewed in the more than 400 entries, many of which are new or have been updated from the first edition. The dictionary's chronology and historical narrative, also updated, cover the entire history of Korea for the benefit of readers who have little or no knowledge of the overall history of the Korean people. The extensive bibliography has been updated to include the most current and best books, journals, and websites, making this a valuable reference source for the scholar, student, and general reader.

 Publisher description

Chronology of the American West University of Georgia Press
 Increasingly a spectator sport, electoral politics have become bitterly polarized by professional consultants and lobbyists and have been boiled down to the distributive mantra of "who gets what." In *Everyday Politics*, Harry Boyte transcends partisan politics to offer an alternative. He demonstrates how community-rooted activities reconnect citizens to engaged, responsible public life, and not just on election day but throughout the year. Boyte demonstrates that this type of activism has a rich history and strong philosophical foundation. It rests on the stubborn faith that the talents and insights of ordinary citizens--from nursery school to nursing home--are crucial elements in public life. Drawing on concrete examples of successful public work projects accomplished by diverse groups of people across the nation, Boyte demonstrates how citizens can master essential political skills, such as understanding issues in public terms, mapping complex issues of institutional power to create alliances, raising funds, communicating, and negotiating across lines of difference. He describes how these skills can be used to address the larger challenges of our time, thereby advancing a renewed vision of democratic society and freedom in the twenty-first century.

Examines the critical events and major characters in the history of the American West.

Kolmogorov Equations for Stochastic PDEs gives an introduction to stochastic partial differential equations, such as reaction-diffusion, Burgers and 2D Navier-Stokes equations, perturbed by

noise. It studies several properties of corresponding transition semigroups, such as Feller and strong Feller properties, irreducibility, existence and uniqueness of invariant measures. In addition, the transition semigroups are interpreted as generalized solutions of Kolmogorov equations.

Discovering the Peoples of Michigan examines the rich multicultural heritage of the Great Lakes State and explores Michigan's ethnic dynamics. Michigan's rapidly changing historical and social structures have far-reaching implications in such areas as public policy, education, management, and private enterprise. *Discovering the Peoples of Michigan* reveals the unique contributions that different and often unrecognized communities have made to Michigan's historical and social identity.

Sociology and Scientism ABC-CLIO

Winner of the 1997 ARNOVA Award for Distinguished Book in Nonprofit and Voluntary Action Research The private third sector has largely displaced public universities and bureaucracies as Latin America's leaders in social science and related policy activities. In many nations, these private research centers have become the main workplace for intellectuals. Mostly think tanks, they are influential political institutions, often making strong contribution to democratization. The success of these research centers marks an unsurpassed triumph for international philanthropy, but it also raises questions about the proper role and structural home for research and advanced study. Levy shows how the centers' success often undermine a region's struggling universities while failing themselves to fulfill higher education's fundamental mission. Levy deals broadly with regional developments, yet systematically identifies and analyzes the crucial subpatterns. He integrates impressive empirical data with conceptual perspectives on nonprofit organizations, comparative politics, and comparative education as well as Latin American studies.

Building the Third Sector University of Pennsylvania Press

This work examines the challenges faced by those wishing to develop progressive visions of transparent global governance and civil society. It traces the history and development of the institutions of global governance as well as the emergence of the anti-globalization movement.

This book provides an in depth analysis of the different ways in which bilingual speakers switch from one language to another in the course of conversation. This phenomenon, known as code-mixing or code-switching, takes many forms. Pieter Muysken adopts a comparative approach to distinguish between the different types of code-mixing, drawing on a wealth of data from bilingual settings throughout the world. His study identifies three fundamental and distinct patterns of mixing - 'insertion', 'alternation' and 'congruent lexicalization' - and sets out to discover whether the choice of a particular mixing strategy depends on the contrasting grammatical properties of the languages involved, the degree of bilingual competence of the speaker or various social factors. The book synthesizes a vast array of recent research in a rapidly growing field of study which has much to reveal about the structure and function of language. *The Loss and Recovery of Transcendence* Fordham Univ Press

 Alexis de Tocqueville (1805-59) came to America in 1831 to see what a great republic was like. What struck him most was the country's equality of conditions, its democracy. The book he wrote on his return to France, *Democracy in America*, is both the best ever written on democracy and the best ever written on America. It remains the most often quoted book about the United States, not only because it has something to interest and please everyone, but also because it has something to teach everyone. When it was published in 2000, Harvey Mansfield and Delba Winthrop's new translation of *Democracy in America*—only the third since the original two-volume work was published in 1835 and 1840—was lauded in all quarters as the finest and most definitive edition of Tocqueville's classic thus far. Mansfield and Winthrop have restored the nuances of Tocqueville's language, with the expressed goal "to convey Tocqueville's thought as he held it rather than to restate it in comparable terms of today." The result is a translation with minimal interpretation, but with impeccable annotations of unfamiliar references and a masterful introduction placing the work and its author in the broader contexts of political philosophy and statesmanship.

 Richard C. Atkinson's eight-year tenure as president of the University of California (1995-2003) reflected the major issues

facing California itself: the state's emergence as the world's leading knowledge-based economy and the rapidly expanding size and diversity of its population. As this selection of President Atkinson's speeches and papers reveals, his administration was marked by innovative approaches that deliberately shaped U.C.'s role in this changing California. These writings tell the story of the national controversy over the SAT and Atkinson's successful challenge to the dominance of the seventy-five-year-old college entrance examination. They also highlight other issues with national significance: U.C.'s experiments with race-neutral admissions programs; the challenges facing academic libraries and the University's pioneering activities with the California Digital Library; and the University's involvement in new paradigms of industry-university research. Together, these speeches and papers open a window on an eventful period in the history of the nation's leading public research university and the history of American higher education.

Though the search for good selectors dates back to the early twentieth century, selectors play an increasingly important role in current research. This book is the first to assemble the scattered literature into a coherent and elegant presentation of what is known and proven about selectors--and what remains to be found. The authors focus on selection theorems that are related to the axiom of choice, particularly selectors of small Borel or Baire classes. After examining some of the relevant work of Michael and Kuratowski & Ryll-Nardzewski and presenting background material, the text constructs selectors obtained as limits of functions that are constant on the sets of certain

partitions of metric spaces. These include selection theorems for maximal monotone maps, for the subdifferential of a continuous convex function, and for some geometrically defined maps, namely attainment and nearest-point maps. Assuming only a basic background in analysis and topology, this book is ideal for graduate students and researchers who wish to expand their general knowledge of selectors, as well as for those who seek the latest results.

A Passion for Justice Cambridge University Press

How Euler Did It is a collection of 40 monthly columns that appeared on MAA Online between November 2003 and February 2007 about the mathematical and scientific work of the great 18th-century Swiss mathematician Leonhard Euler. Inside we find interesting stories about Euler's work in geometry and his solution to Cramer's paradox and its role in the early days of linear algebra. We see Euler's first proof of Fermat's little theorem for which he used mathematical induction, as well as his discovery of over a hundred pairs of amicable numbers, and his work on odd perfect numbers, about which little is known even today. Professor Sandifer based his columns on Euler's own words in the original language in which they were written. In this way, the author was able to uncover many details that are not found in other sources.
