As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy

priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

 Whether entering higher education straight from school, or returning to study later in life, students need to develop effective study skills to get the most out of

a course. Whatever the subject, this book will help to achieve the aims of the student by offering practical advice and useful techniques for successful study. These skills are not always taught as part of courses because of time restriction, but with an increased performance emphasis for lecturers they are vital to the success of the course. In addition to this with more and more people returning to education and undergoing Continuing Professional Development the audience for this book is growing rapidly. The book covers three main areas: * accepting responsibility for learning: personal well-being, avoiding stress and organising time * student centred learning: developing the ability to learn and communicate through thinking, listening, observing, writing and talking * revision and examination techniques: approaching examinations with

confidence. With additional help of choosing the right course and a new section on computer skills, *Study!* will be a valuable addition to the bookshelf of any student.

Works of fiction are works of the imagination and for the imagination. Gregory Currie energetically defends the familiar idea that fictions are guides to the imagination, a view which has come under attack in recent years. Responding to a number of challenges to this standpoint, he argues that within the domain of the imagination there lies a number of distinct and not well-recognized capacities which make the connection between fiction and imagination work. Currie then considers the question of whether in guiding the imagination fictions may also guide our beliefs, our outlook, and our habits in directions of learning. It is widely held that fictions very often provide opportunities for the acquisition of knowledge and of skills. Without denying that this sometimes happens, this book explores the difficulties and dangers of too optimistic a picture of learning from fiction. It is easy to exaggerate the connection between fiction and learning, to ignore countervailing tendencies in fiction to create error and ignorance, and to suppose that claims about learning from fiction require no serious empirical support. Currie makes a case for modesty about learning from fiction — reasoning that a lot of what we take to be learning in this area is itself a kind of pretence, that we are too optimistic about the psychological and moral insights of authors, that the case for fiction as a Darwinian adaptation is weak, and that empathy is both hard to acquire and not always morally advantageous. *Middle Grades Mathematics* The Stationery Office
