This book is open access under a CC BY
4.0 license. It constitutes a unique source
of knowledge and guidance for all
healthcare workers who care for patients
with sepsis and septic shock in resource-
limited settings. More than eighty percent
of the worldwide deaths related to sepsis

occur in resource-limited settings in low
and middle-income countries. Current
international sepsis guidelines cannot be
implemented without adaptations towards
these settings, mainly because of the
difference in local resources and a
different spectrum of infectious diseases
causing sepsis. This prompted members of
the Global Intensive Care working group of
the European Society of Intensive Care
Medicine (ESICM) and the Mahidol-Oxford
Tropical Medicine Research Unit (MORU,
Bangkok, Thailand) - among which the
Editors - to develop with an international

group of experts a comprehensive set of
recommendations for the management of
sepsis in resource-limited settings.
Recommendations are based on both
current scientific evidence and clinical
experience of clinicians working in
resource-limited settings. The book
includes an overview chapter outlining the
current challenges and future directions of
sepsis management as well as general
recommendations on the structure and
organization of intensive care services in
resource-limited settings. Specific
recommendations on the recognition and

management of patients with sepsis and septic shock in these settings are grouped into seven chapters. The book provides evidence-based practical guidance for doctors in low and middle income countries treating patients with sepsis, and highlights areas for further research and discussion.

Nelson Essentials of Pediatrics Springer Science & Business Media

Textbook of Paediatric Emergency Medicine E-Book Elsevier Health Sciences
The MassGeneral Hospital for Children Handbook of Pediatric Global Health is a concise resource for the ever-increasing number of health professionals involved in global health, many of whom spend a few weeks to months or even years providing medical care in resource-poor countries. This Handbook provides practical, evidence-based, hands-on guidance for managing and preventing childhood illnesses when resources are limited in low- and middle-income countries. It also offers a setting-specific understanding and management approaches to the major causes of childhood mortality, including pneumonia, diarrhea, birth asphyxia, complications of preterm birth, and neonatal sepsis. The Handbook provides an overview of childhood mortality, health systems, and the various stakeholders that play a role in the global health arena, and also contains chapters focusing on adolescents who are increasingly recognized as a unique population in

whom interventions can go a long way in both consolidating the gains made in childhood and preventing adult disease. Finally, key topics in non-communicable diseases are covered, including trauma and injuries, pediatric mental health, child and adolescent rights, and oral health. Not meant solely for pediatricians, the Handbook is designed for generalists, specialists, doctors, nurses, other health care workers, and those in training. An indispensable reference for health professionals overseas, the Handbook will also be a useful addition and resource for academic centers and universities in industrialized nations that are creating courses for trainees who will do clinical electives abroad during their training.
