The world of aviation
has moved on rapidly

since the appearance
of the ninth edition of
this pre-eminent
resource five years
ago. Those
developments pertain
to market access and
market behaviour by
air carriers, including

competition, new perceptions of safety and security, among others, in relation to transparency of accident investigation and cybersecurity, case law in the area of airline liability, with new cases from the United States, product liability and insurance, the United Kingdom, and elsewhere, the growing importance of environmental concerns, the rights and obligations of passengers, also in the context of 'unruly' passengers, and innovative methods for financing aircraft. Special attention has been paid in this edition to regional integration movements, especially in Europe, affecting the mentioned subjects. The book's extensive references to other

sources in the field have been expanded and updated by the author and experts in specialised areas. The present edition addresses the following topics: the regulatory framework governing the operation of air services, including the principle of sovereignty in national airspace; the distinction between State and civil aircraft; dispute settlement in international civil aviation; economic regulation of international air transport services, including the establishment of air services agreements; inter-airline cooperation in the context of competition law regimes; liability of the various service providers, in particular airlines, and related insurance coverage;

the promotion of safety standards; criminal acts affecting the safety of aviation; the role of international and regional organisations with particular reference to that of the European Union; liability of the aircraft manufacturer for equipment; and financial and security interests in mobile equipment. The many practitioners, officials, business people, and academics with a professional interest in aviation law will appreciate this new edition as one of the fundamental works in the field, and newcomers will discover an incomparable resource. This eleventh edition is ready to be of unmatched service to any practising member of the air law

community anywhere in the world.

Thoughts From Chairman Bud Causey Enterprises, LLC

Written in the context of the post-9/11 legal climate, this text introduces all the major areas of aviation, covering such topics as the international air law regime, crimes involving aircraft, international air carriage, litigation management, and governmental immunity from liability.

The dictionary defines ruminant as to meditate or muse and that is just what the author of "Ruminations from Chairman Bud" has found himself doing as his tally of

years passed grows. Usually this musing occurs late at night when sleep eludes him and a constant flow of thoughts and connections occupies his mind. That there is no pattern would be immediately obvious to an outside observer who might conclude that the only common denominator is a dream-like tendency to jumble words and thoughts into patterns that may or may not ring true when daylight comes. Despite this chaos the author frequently finds himself arising from the warm bed, donning slippers and robe, and advancing to his computer to capture the essence of a rumination before it is lost or scrambled. Fortunately these captured thoughts

occasionally are deemed worth keeping and further editing in the light of day. This book is a collection of these ruminations. Any reader who makes a quick perusal of the book's contents will conclude that the subject matter is highly varied and neither follows a pattern nor reveals pearls of wisdom that may benefit humankind. Rather they are sometimes serious, sometimes humorous, but always relatively disjoint when compared to tomes that have been set down by the masters of philosophy or those who attempt to support a particular political or religious theme. On occasion the author sets down his ponderous thoughts on weighty matters like

assisted suicide and the question of is there a god. And occasionally the subject turns to more light-hearted subjects such as the life and motivations of a tiny bug scurrying back and forth across a cast-iron tabletop. And there are a few essays of a tutorial nature such as the necessary phases in starting a company based on a whiz-bang invention and on the subjects of types of photography and how they differ. So the potential reader should be forewarned that it is highly unlikely that this jumbled collection will ever appear on the New York Times Best Sellers List and there will be no boisterous book signing sessions at Barnes and Noble. Rather it is the hope that a gentle reading

will evoke in the reader a propensity to also occupy a portion of his or her time on earth simply contemplating the world about us and its many strange and interesting facets. Call it musing, mediating, ruminating or whatever, it can take the individual far afield and still return safely back to the reality of life as it unfolds about him or her. Enjoy.

First envisioned by Leonardo da Vinci and first deployed in World War II, the helicopter is now a universal icon of modern warfare, a key component of combat planning around the world, and one of the military's most versatile and effective tools. Helicopters: An Illustrated History of Their Impact covers the development of helicopters from a concept in Leonardo daVinci's mind to the first successful machines in the early 1900s to the latest tilt-rotor designs. Time and again, in a story of constant innovation, designers answered the concerns of military planners with more maneuverable, more capable rotorcraft. With expert analysis and specific

details of every significant model ever used, Helicopters shows how these once denigrated machines became essential to a variety of missions (reconnaissance, transport, attack, support, evacuation, urban combat, quick strikes behind enemy lines, and more). In addition, the book looks at the impact of rotorcraft beyond the military, including their ever-widening role in emergency medical care, police work, traffic control, agriculture, news reporting, and more. Approximately 70 photographs of helicopter models, including a number taken in combat situations Glossary of terms unique to rotorcraft, including autorotation,
