JAIDYN SHANE

Differentiation Through Personality Types Psychology Press

A CHOICE Magazine Outstanding Academic Title of 2018. A novel approach to understanding personality, based on evidence that we share more than we realize with other mammals. This book presents the wealth of scientific evidence that our personality emerges from evolved primary emotions shared by all mammals. Yes, your dog feels love—and many other things too. These subcortically generated emotions bias our actions, alter our perceptions, guide our learning, provide the basis for our thoughts and memories, and become regulated over the course of our lives. Understanding personality development from the perspective of mammals is a groundbreaking approach, and one that sheds new light on the ways in which we as humans respond to life events, both good and bad. Jaak Panksepp, famous for discovering laughter in rats and for creating the field of affective neuroscience, died in April 2017. This book forms part of his

lasting legacy and impact on a wide range of scientific and humanistic disciplines. It will be essential reading for anyone trying to understand how we act in the world, and the world's impact on us.

Effective Teaching, Effective Learning Oxford University Press

The ideal guide to choosing the right word. Entries go beyond the word lists of a thesaurus, explaining important differences between synonyms. Provides over 17,000 usage examples. Lists antonyms and related words.

The Negative Trait Thesaurus: A Writer's Guide to Character Flaws JADD Publishing

The Five-Factor Model Across Cultures was designed to further an understanding of the interrelations between personality and culture by examining the dominant paradigm for personality assessment - the Five-Factor Model or FFM - in a wide variety of cultural contexts. This volume provides a comprehensive overview of contemporary research and theory about personality traits and culture that is extremely relevant to personality psychologists, cross-cultural psychologists, and psychological anthropologists.

The Importance of Psychological Traits JADD Publishing

Provides advice, lesson plans, and activities to instruct a variety of personality types in a diverse classroom.

The Developing Structure of Temperament and Personality From Infancy To Adulthood Corwin Press

People's experience in their everyday lives has attracted much research interest in the past two decades. This book focuses on the interplay of temperament and other personality traits with characteristics of situations and events in hourly and dailey mood fluctuations. All contributors used the Time Sampling Diary (TSD) in collecting data from a variety of populations over several weeks, at least four times a day at randomly selected points of time. Part 1 of the book introduces the TSD technique with detailed instructions for data collection, coding, and analysis. Part 2 covers reports on a study of Polish bank employees. The chapters of Part 3 reflect the experience of dangerous work situations in a steel factory, the emotional adjustment of adolescents to short and long-term unemployment, and the influences of husbands' daily or weekly commuting on their

wives coping with housework and childcare. The chapters of Part 4 take a more philosophical approach to the material. The first contribution shows that personality traits influence well-being primarily in situations characterized by freedom of choice; the second introduces a rather new methodological approach clarifying the affinities of situations and subjective experience.

Who Are You, Really? Phoenix International Publications, Inc.

Cattell's Sixteen Personality Factor Questionnaire, the Taylor Manifest Anxiety Scale, the Pensacola Z Scale, and the Adjective Check-List were evaluated as predictors of success/failure in Naval aviation training. Results showed that certain personality variables contributed significantly to multiple prediction. (Author).

Bud, Not Buddy Psychology Press

This volume illustrates the diversity in assessment philosophy, theoretical orientation, and research methodology that is characteristic in the field of personality assessment. Topics range from anxiety about test taking and teaching science, to the emotional distress evoked by an environmental catastrophe.

Issues in Person Perception Springer Science & Business Media

Crafting likable, interesting characters is a balancing act, and finding that perfect mix of strengths and weaknesses can be difficult. Not only does a well-drawn protagonist need positive attributes to help him succeed, he must also have flaws that humanize him and give him something to overcome. The same is true of villains and the rest of the story's supporting cast. So how can writers figure out which flaws best fit their characters? Which negative traits will create personality clashes and conflict while making success difficult? Nothing adds complexity like character flaws. Inside The Negative Trait Thesaurus you'll find: * A vast collection of flaws to explore when building a character's personality. Each entry includes possible causes, attitudes, behaviors, thoughts, and related emotions * Real examples from literature, film, or television to show how each flaw can create life challenges and relational friction * Advice on building layered and memorable characters from the ground up * An in-depth look at backstory, emotional wounds, and how pain twists a character's view of himself and his world, influencing behavior and decision making * A flaw-centric exploration of character arc, relationships, motivation, and basic needs * Tips on how to best show a character's flaws to readers while avoiding common pitfalls * Downloadable tools to aid writers in character creation The Negative Trait Thesaurus sheds light on your character's dark side. Written in list format and fully indexed, this brainstorming resource is perfect for creating deep, flawed characters readers will relate to.

The Revised NEO Personality Inventory Penguin

Originally published in 1981, this volume presents the domain of personality as a fuzzy set that includes features previously identified with cognitive and social psychology. Few of the individual contributions are centrally concerned with individual differences and cross-situational stability, but these traditional themes certainly appear in several of the chapters. The remaining chapters deal with the general processes mediating the interaction between the person and the social environment, filling out the fuzzy set of personality psychology. Part 1 seeks to locate contemporary trends in the cognitive psychology of personality against a backdrop of historical events. The chapters in Part 2 discuss some of the cognitive processes mediating social behaviour. Part 3 contains contributions concerned with the rules by which people make judgments about objects in the social world. The self, a dominant topic in personality theory and research, is treated extensively in Part 4. Although many of the chapters are explicitly concerned with the relations between cognition and action – after all, most human interaction takes the form of judgments and communication – the contributions in Part 5 make the links to overt behaviour. Finally, Part 6 offers two discussions of the previous contributions from the perspective of cognitive psychology.

Person Perception and Attribution Guilford Press

Did you know that the oldest riddle was written 4,000 years ago? That's a long time! This jolly joke book is full of riddles, limericks, and tongue twisters for kids to giggle their way through. Little jokesters will practice problem-solving skills and reading aloud as they run through ridiculous riddles and rhymes!

The Psychological Foundations of Culture Psychology Press

The perfect kids activity book for every parent looking for ways to help their children learn about the incredible world around us. In a time when children are too often coddled, 50 Dangerous Things (You Should Let Your Children Do) reminds readers that climbing trees is good for the soul, and that a pocket knife is not a weapon. Full of exciting ways children can explore the world around them, this book explains how to "Play with Fire" and "Taste Electricity" while learning

about safety. With easy-to-follow instructions, it includes: • Activities, like walking a tightrope • Skills, like throwing a spear • Projects, like melting glass • Experiences, like sleeping in the wild As it guides you through these childlike challenges and more, 50 Dangerous Things (You Should Let Your Children Do) will inspire the whole household to embrace a little danger.

Personality, Cognition and Social Interaction Springer Science & Business Media

This book describes the origin, history, rationale, procedures, developments, models and practical applications of the so-called Big Five traits, providing a concise but thorough insight into the Big Five model of personality and its emergence from the lexical trait approach to personality structure. Written by one of the world's leading experts in this field, this integrated text includes a critical description of the theory that provides readers with all the necessary background information. The text is of interest to specialists in the field of personality and to applied psychologists.

Persons, Situations, and Emotions Springer Science & Business Media

"Traditionally, scientists have emphasized what they call the first and second natures of personality--genes and culture, respectively. But today the field of personality science has moved well beyond the nature vs. nurture debate. In *Who Are You, Really?* Dr. Brian Little presents a distinctive view of how personality shapes our lives--and why this matters. Little makes the case for a third nature to the human condition--the pursuit of personal projects, idealistic dreams, and creative ventures that shape both people's lives and their personalities. Little uncovers what personality science has been discovering about the role of personal projects, revealing how this new concept can help people better understand themselves and shape their lives"--Provided by publisher.

The Reading Intervention Toolkit Springer Science & Business Media

Reports the findings from extensive cross-cultural studies of the relative importance of different psychological traits in 20 countries, and the relative favorability of these traits in a subset of 10 countries. The psychological characteristics studied are the 300 items of the Adjective Check List (Gough and Heilbrun, 1980). Concepts, methodology, and interpretation are fully presented. In addition, the appendices enable interested readers to test hypotheses of their own. Annotation copyrighted by Book News, Inc., Portland, OR

Breathing Life Into Your Characters Delacorte Books for Young Readers

The affective realm is a critical, but often forgotten, aspect of schooling. The development of character and the formation of appropriate learning environments rely to a large extent on understanding the affective nature of students. Even when the focus is on cognitive achievement, affect has a role to play. Teachers frequently mention a lack of motivation as a primary reason for students not achieving as well as they should or as well as their teachers would like. Despite the importance of affect, educators rarely make an effort to systematically collect and use information about students' affective characteristics to better understand students and to substantially improve the quality of education they receive. This book's purpose is to provide educators with the knowledge and skills they need to design and select instruments that can be used to gather information about students' affective characteristics. Once valid and reliable information has been gathered, it can be used to aid in understanding and to improve educational quality. The second edition features: * an updated list of affective characteristics (i.e., attitudes, values, interests, self-esteem, self-efficacy, locus of control) * a dual emphasis on selecting and designing affective assessment instruments * an emphasis on multi-scale instruments (i.e., a single instrument with multiple affective scales) * the use of a single small data set to illustrate and foster understanding of key concepts and procedures * a dual emphasis on data about individual students and groups of students * a dual focus on the instrumental value of affective data and the inherent value of affective data (i.e., affect is valuable in and of itself)

The Q-sort Method in Personality Assessment and Psychiatric Research Psychology Press

It's a writer's job to create compelling characters who can withstand life's fallout without giving up. But building authentic, memorable heroes is no easy task. To forge realistic characters, we must hobble them with flaws that set them back while giving them positive attributes to help them achieve their goals. So how do writers choose the right blend of strengths for their characters—attributes that will render them admirable and worth rooting for—without making it too easy for them to succeed? Character creation can be hard, but it's about to get a lot easier. Inside The Positive Trait Thesaurus, you'll find: * A large selection of attributes to choose from when building a personality profile. Each entry lists possible causes for why a trait might emerge, along with associated attitudes, behaviors, thoughts, and emotions * Real character examples

from literature, film, or television to show how an attribute drives actions and decisions, influences goals, and steers relationships * Advice on using positive traits to immediately hook readers while avoiding common personality pitfalls * Insight on human needs and morality, and how each determines the strengths that emerge in heroes and villains alike * Information on the key role positive attributes play within the character arc, and how they're vital to overcoming fatal flaws and achieving success * Downloadable tools for organizing a character's attributes and providing a deeper understanding of his past, his needs, and the emotional wounds he must overcome If you find character creation difficult or worry that your cast members all seem the same, The Positive Trait Thesaurus is brimming with ideas to help you develop one-of-a-kind, dynamic characters that readers will love. Extensively indexed, with entries written in a user-friendly list format, this brainstorming resource is perfect for any character creation project.

The Big Five Personality Factors Potomac Books, Inc.

Person perception is of great importance in everyday life and human science. Judgment of other people's characteristics and intentions is important for successfully planning actions within a social environment. Questions about the formation of impressions and causal attributions are central to social psychology and the study of diagnostic judgment formation. The field of person perception deals with questions of how impression formation proceeds, what characteristics and intentions are attributed to other people, and how preformed schemata and stereotypes influence people's first impressions. Research on person perception developed rapidly after the Second World War. In the 1950s the precision and accuracy of person perception received special interest, but the problems concerning whether an individual's assessment of another personality is exact or not could not be solved. Another approach, which began in the 1940s and was derived from the Gestalt psychological tradition, dealt with impression formation based on selected social cues. This approach, which proved to be very useful, had considerable influence on both the research methods and the theoretical orientation of the research work. On the one hand, by using a combination of individual cues (like physical characteristics) researchers tried to ascertain how an impression of a person was formed. On the other hand, the Gestalt psychological orientation led to an interest in the process of person perception, which in the last 10 years has concentrated on questions concerning information reception and processing.

Assessing Affective Characteristics in the Schools Routledge

Bockting has produced a work that focuses on the "people" that Faulkner created in his four major psychological novels: *The Sound and the Fury* (1929); *As I Lay Dying* (1920), *Light in August* (1932), and *Absalom, Absalom!* (1936). The author writes not about these people, either as literary characters or as human beings, but instead has allowed them to come alive in their own time, through their own texts. Psychostylistics is the innovative approach to the literary character that Bockting employs, bringing together new developments in narrative psychology and psychiatry with literary stylistics and mind-style to provide detailed textual and contextual evidence in support of its observations on personality. Contents: The Literary Character: Between Life and Linguistic Style; Mind-Style in *The Sound and the Fury*; Multiple Voices in *As I Lay Dying*; *Light in August* and the Issues of Unreliability; *Absalom, Absalom!*: A Novel of Attribution; Character, Personality, and Psychostylistics.

Creating Characters Penguin

This book is the first to bring together researchers in individual differences in personality and temperament to explore whether there is any unity possible between the temperament researchers of infancy and childhood and the major researchers in adult personality. Prior to the workshop which resulted in this volume, the existing literature seemed to document a growing consensus on the part of the adult personality researchers that five major personality dimensions - the "Big Five" -- might be sufficient to account for most of the important variances in adult individual differences in personality. In contrast to this accord, the literature on child and infant individual differences seemed to offer a wide variety of opinions regarding the basic dimensions of difference in personality or temperament. The editors believed that they could encourage researchers from both the adult and child areas to consider the importance of a lifespan conceptualization of individual differences by discussing their research in terms of a continuity approach. Written by some of the most distinguished scholars from Great Britain, continental Western Europe, and Eastern Europe as well as the United States and Canada, the chapters present a cross-cultural view of both adult personality and temperament in infancy and childhood. By sharing their recent data, techniques, and theoretical speculations, the chapter authors communicate the research enthusiasm engendered by the growing consensus of the adult "Big

Five" as well as the exciting prospects of an integrative program of research from infancy to adulthood that will clarify and consolidate what is now a disparate set of methods, theory, and findings across the lifespan. The editors suggest that this volume will have considerable heuristic

value in stimulating researchers to conceptualize their work in developmental, lifespan approaches that will lead to a consolidation of individual differences research at every age.
The Book Thief Seattle ; Toronto : Hogrefe & Huber

Test aims to describe an individual's personality in a form suitable for quantitative comparison and analysis. the test is an application of the Q-sort method. Observer evaluation test administered individually.
