This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus

on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

The 2003 Nat. Assessment of Adult Literacy (NAAL) assessed the English literacy of adults in the U.S. The assessment was administered to more than 19,000 adults (ages 16 and older). The tasks included on the assessment were designed to measure functional literacy. Unlike indirect measures of literacy, the assessment measured literacy directly through tasks completed by adults. These tasks represent a range of literacy activities that adults are likely to face in their daily lives. The main literacy assessment and the core literacy tasks are two of the four components of the NAAL project. This report focuses on the results of the remaining two components: the Fluency Addition to NAAL and the Adult Literacy Supplemental Assessment. Tables.
