Easy to read and act on immediately, this concise guide shows how organizations can work more effectively with in-house or contracted project managers and their teams, using specific collaborative techniques to improve success rates, reduce project costs, and enable organizations to benefit from common-sense, cost-effective project management approaches that work. Using a clear structure and accessible style, the book demonstrates how: Managers can create an organizational environment more naturally adapted for project work and recognition of business priorities; Barriers to project work can be removed so project managers can focus on resolving real project problems; Specific collaborative project management methods engaging business owners, users, and technical teams can be illuminated and implemented; Projects can fit within an architecture that aligns with business needs using models and workflow designs; and Standardized delivery management can unify in-house and vendor teams to create a uniform and predictable owner experience. The book is aimed at managers and executives (both IT and users) in corporations and vendor firms who are engaged in delivering projects. The book will also be invaluable to any project manager or senior practitioner who is interested in a business-oriented, unified, and collaborative approach to project management.

The Fast Forward MBA in Project Management Entrepreneur Press

Manufacturing and service industries have significantly improved their levels of productivity, quality, and profitability over the past 30 years, whereas in the construction industry similar levels of improvement have been impossible to achieve. Numerous reports have identified fragmentation of the industry's management structures and processes as the underlying cause of the waste and inefficiencies that keep costs high and margins low. Integrated Design and Construction is an integrated yet

competitive form of procurement, design and project delivery based on the principle of purchasing any other high value warranted manufactured product. Such an approach would make the construction process more like other manufacturing industries, allowing contractors to make similar improvements to those already seen in other manufacturing industries. Designed for use by experienced construction professionals, familiar and proficient with traditional design and construction system best practice, this Code of Practice provides both client and constructor with the necessary information to adopt this approach to create well-designed and well-constructed products, fully meeting client needs.

e-Invoicing is new to Indian Tax Payers, but it is implemented in 100+ countries across the globe and has still not matured. e-Invoicing is implemented in all the countries in a phased manner, and India is also following the same. In India, e-Invoicing will be rolled out from 1st Oct 2020, as one of the anti-tax evasion measures for taxpayers who are having a turnover above Rs 500 crores in a financial year. Similar to the rollout of GST, where the taxpayers have to change the business process for effective implementation, the rollout of e-Invoice also involves changes in the business process, and the book covers the same. It also talks about the implementation in some of the countries, along with the benefits of e-Invoice to the taxpayers and the nation as a whole. The book provides a unique combination, as it talks about the provisions of the e-Invoice and the impact on the business and interpretation of provisions related to the same and also the API architecture and schema of Invoice Reference Number. The books also explains the reader on what is an e-Invoice? What is IRN? How it is generated? What is QR code in e-Invoicing etc., The book also discusses the implementation process the corporates have to adopt for the rollout and also various methods of implementing the e-Invoice in organizations. It also talks about the best methods of implementing the same, along with validations to be

incorporated in the system. e-Invoice the Encyclopedia for Indian GST covers all the aspects of the e-Invoicing from the functional, technical and legal aspects.

This book constitutes the research papers presented at the Joint 2101 & 2102 International Conference on Biometric ID Management and Multimodal Communication.

BioID_MultiComm'09 is a joint International Conference organized cooperatively by COST Actions 2101 & 2102. COST 2101 Action is focused on 'Biometrics for Identity Documents and Smart Cards (BIDS)', while COST 2102 Action is entitled 'Cross-Modal Analysis of Verbal and Non-verbal Communication'. The aim of COST 2101 is to investigate novel technologies for unsupervised multimodal biometric authentication systems using a new generation of biometrics-enabled identity documents and smart cards. COST 2102 is devoted to develop an advanced acoustical, perceptual and psychological analysis of verbal and non-verbal communication signals originating in spontaneous face-to-face interaction, in order to identify algorithms and automatic procedures capable of recognizing human emotional states.

Credit derivatives as a financial tool has been growing exponentially from almost nothing more than seven years ago to approximately US\$5 trillion deals completed by end of 2005. This indicates the growing importance of credit derivatives in the financial sector and how widely it is being used these days by banks globally. It is also being increasingly used as a device of

synthetic securitisation. This significant market trend underscores the need for a book of such a nature. Kothari, an undisputed expert in credit derivatives, explains the subject matter using easy-to-understand terms, presents it in a logical structure, demystifies the technical jargons and blends them into a cohesive whole. This revised book will also include the following: - New credit derivative definitions - New features of the synthetic CDO market - Case studies of leading transactions of synthetic securitisations - Basle II rules - The Consultative Paper 3 has significantly revised the rules, particularly on synthetic CDOs - Additional inputs on legal issues - New clarifications on accounting for credit derivatives/credit linked notes

Coordination Languages and Models John Wiley & Sons
Despite fears that regulators around the world would act to curtail securitisation severely in the aftermath of the collapse of Enron, WorldCom, and Parmalat, the securitisation industry has witnessed what can only be described as relentless innovation. Securitisation remains one of the most important means for financial institutions to diversify their funding, transfer credit risk and manage solvency requirements. This volume, the second in a series focusing on the latest innovations in the global securitisation industry, provides advisers with detailed guidance on key structural and legal issues of innovative securitisations, as well as describing the most recent developments in the accounting and risk-capital treatment of securitisation transactions. The contributors represent a wide range of expert participants in the design, execution, and regulation of securitisation transactions. Among the critical features of contemporary securitisation covered are the following: project finance CLOs; securitisation of equity risk; securitisation of commodity risk through commodity trigger swaps; the convergence of structured credit and securitisation markets; innovation in RMBS: negative equity transactions; innovation in CMBS: A/B structure new markets in Europe, Japan, and Islamic countries; catastrophe risk securitisation; effect of recent US bankruptcy legislation on synthetics; microfinance loan securitisation in emerging markets; public sector securitisation; securitisable intellectual property; application of accounting standards in a rapidly changing environment, and updated analysis of Basel II. The practical perspective of the contributions, combined with the extensive use of case studies of key

transactions, should make this volume an invaluable resource for lawyers as well as legal and business academics interested in the very latest developments in the global securitisation markets.

This volume constitutes the proceedings of the combined 7th International Workshop on Trends in Enterprise Architecture Research (TEAR 2012) and the 5th Working Conference on Practice-Driven Research on Enterprise Transformation (PRET-5), held in Barcelona, Spain, October 23-24, 2012, and co-located with The Open Group's Conference on Enterprise Architecture, Cloud Computing, and Security. Joining the forces of the two events with The Open Group Conference provided the unique opportunity for an intensive exchange between practitioners as well as for discussions on standardization efforts and academic research in the areas of enterprise transformation and enterprise architecture (EA). Based on careful reviews by at least three Program Committee members, 18 papers were chosen for inclusion in these proceedings. They were presented in six sessions on enterprise architecture management (EAM) effectivity, languages for EA, EAM and the ability to change, advanced topics in EA, governing enterprise transformations, and EA applications.

Globalisation has created many opportunities for economic development, but it is also associated with rising income inequality and poverty. International crises such as the international financial and economic crisis of 2008, and more recently the global health pandemic, have led to a rise in unemployment and income losses for workers and a surge in the violation of workers' rights. At global level intergovernmental organisations including the World Bank and the IMF are influential actors and policy makers which promote the UN Sustainable Development Goals. However, the International Financial Institutions (IFIs) have been criticised for their internal political power imbalances and macroeconomic policy prescriptions based on neo-liberal principles. The Global Unions and their affiliates as well as the International Labour Organisation (ILO) regularly comment on the negative impact of the IFI's policies in regard to labour flexibilisation and the privatisation of public and social

services. In 2002 a formalised dialogue was established between the Global Unions and the IFIs which addresses labour, social and environmental issues. This dialogue takes place at three levels: the country level, the sector level, and the headquarters level. The ILO maintains its own dialogue with the IFIs, but it also participates at the headquarters-level dialogue between the Global Unions and the IFIs. Employment Relations and Global Governance focuses on the headquarters-level dialogue which can be considered as a strategic instrument that helps the Global Unions and their affiliates to exercise influence over the policies of the IFIs, especially those policies which concern workers. The book describes and analyses the development of the dialogue since its establishment with a particular focus on factors which promote and hinder the dialogue. The book provides important insights into the real-world functioning of the institutions of economic global governance and its broader impact on the world of work. It is likely to be key reading for academics, researchers and students studying global employment relations, political economy, and international organisations. It will also be of interest to international and national trade unions, non-governmental organisations, and policy makers.

Object-based Distributed Computing is being established as the most pertinent basis for the support of large, heterogeneous computing and telecommunications systems. The advent of Open Object-based Distributed Systems (OODS) brings new challenges and opportunities for the use and development of formal methods. Formal Methods for Open Object-based Distributed Systems presents the latest research in several related fields, and the exchange of ideas and experiences in a number of topics including: formal models for object-based distributed computing; semantics of object-based distributed systems and programming languages; formal techniques in object-based and object oriented specification, analysis and design; refinement and transformation of specifications; multiple viewpoint modeling and consistency between different models; formal techniques in distributed systems verification and testing; types, service types and subtyping; specification, verification and testing of quality of service constraints and formal methods and the object life cycle. It contains the selected proceedings of the International Workshop on Formal Methods for Open Object-based Distributed

Systems, sponsored by the International Federation for Information Processing, and based in Paris, France, in March 1996.
