“Sprawl” is one of the ugliest words in the American political lexicon. Virtually no one wants America’s rural landscapes, farmland, and natural areas to be lost to bland, placeless malls, freeways, and subdivisions. Yet few of America’s fast-growing rural areas have effective rules to limit or contain sprawl. Oregon is one of the nation’s most celebrated exceptions. In the early 1970s Oregon established the nation’s first and only comprehensive statewide system of land-use planning and largely succeeded in confining residential and commercial growth to urban areas while preserving the state’s rural farmland, forests, and natural areas. Despite repeated political attacks, the state’s planning system remained essentially politically unscathed for three decades. In the early- and mid-2000s, however, the Oregon public appeared disenchanted, voting repeatedly in favor of statewide ballot initiatives that undermined the ability of the state to regulate growth. One of America’s most celebrated “success stories” in the war against sprawl appeared to crumble, inspiring property rights activists in numerous other western states to launch copycat ballot initiatives against land-use regulation. This is the first book to tell the story of Oregon’s unique land-use planning system from its rise in the early 1970s to its near-death experience in the first decade of the 2000s. Using participant observation and extensive original interviews with key figures on both sides of the

state’s land use wars past and present, this book examines the question of how and why a planning system that was once the nation’s most visible and successful example of a comprehensive regulatory approach to preventing runaway sprawl nearly collapsed. Planning Paradise is tough love for Oregon planning. While admiring much of what the state’s planning system has accomplished, Walker and Hurley believe that scholars, professionals, activists, and citizens engaged in the battle against sprawl would be well advised to think long and deeply about the lessons that the recent struggles of one of America’s most celebrated planning systems may hold for the future of land-use planning in Oregon and beyond.

Cities of Tomorrow Edward Elgar Publishing

The book is in three parts.

Evaluation in the Planning Process Taylor & Francis

Cities of Tomorrow is a critical history of planning in theory and practice in the twentieth century, as well as of the social and economic problems and opportunities that gave rise to it. Trenchant, perceptive, global in coverage, this book is an unrivalled account of its crucial subject. The third edition of Cities of Tomorrow is comprehensively revised to take account of abundant new literature published since its original appearance, and to view the 1990s in historical perspective. This is the definitive edition, reviewing the development of the modern planning movement over the entire span of the twentieth century.

An Overview of Urban and Regional Planning Routledge

Knighthood in 1998 'for services to the Town and Country Planning Association', and in 2003 named by Her Majesty Queen Elizabeth II as a 'Pioneer in the Life of the Nation', Peter Hall is internationally renowned for the breadth and depth of his studies and writings on urban and regional planning. For the last 50 years, he has captured and helped to create the 'planning imagination'. Here the editors have brought together in five themes a series of critical reflections on Peter's vast and diverse contributions. Those reflections are provided by colleagues familiar with his work. The five parts are devoted to Peter Hall's breadth of academic work, covering the history of cities and planning, London, spatial planning, connectivity and mobility, and urban globalization. Finally, as a sixth part, the editors have asked Peter Hall himself to reflect on his career and the sources of his imagination. The story this book tells is not one of a singular, totally consistent theoretical and philosophical view elaborated over several decades. Rather it covers a set of views that necessarily admits signs of Peter's inconsistency and imperfection over the years – the insights and imperfections that inevitably accompany the exercise of a nonetheless remarkably fertile, restless and inspiring planning imagination.

Urban and Regional Planning [By] Peter Hall Springer

This is the key book on global urban development at the start of the twenty-first century. It systematically reviews the main scenarios for the first 25 years of the twenty-first century and outlines an action plan to meet likely problems.

Inventive City-Regions Routledge

Evaluation in the Planning Process examines the role of evaluation in the overall planning process and the implications of evaluation for the organization and management of studies. Emphasis is placed on the nature of evaluation and the functions it should fulfill in the urban and regional planning process, as well as the interrelationships that should exist between evaluation and other planning activities. This book consists of 12 chapters organized into three sections. The first section focuses on principles governing the use of evaluation in the planning process and includes a model of general urban and regional planning. Various methods that are available for evaluating planning proposals are considered, with emphasis on the social cost-benefit approach and the planning balance sheet method. The chapters that follow explore the role of measurement in plan evaluation and review seven planning studies to critically examine UK experience in the application of evaluation methods to urban and regional planning problems. This book concludes by presenting the principles and guidelines for the short-listing of options and assessing the influence of various practical circumstances on the planning process. Some final recommendations on the organization and structure of the planning process, and the nature and role of evaluation within it, are offered. This book is intended for specialists, planners, and those who are engaged in the task of aiding decisions on urban and regional planning problems. This text will appeal especially to those who are concerned with formulating planning processes and with the management of studies.

Planning Twentieth Century Capital Cities Verso Books

This is the sixth edition of the classic text for students of geography and urban and regional planning. It gives an historical overview of the changes in cities and regions and in the development of the theory and practice of planning throughout the 20th and 21st centuries. The extensively revised edition now incorporates new material on European issues, as well as updated country-specific sections and the impact of recession. Specific references are made to the most important British developments in recent times, including new towns, neo-liberalism, the devolution to Scotland, Wales and Northern Ireland, and to cities and combined authorities, the role of infrastructure and high-speed rail, the impact of austerity, neighbourhood planning, Brexit and the continual story of the north-south divide. A chapter on United States planning discusses the continuing trends of urban dispersal and social polarisation, the treatment of climate change, the rise of edge cities and the decline of rustbelt cities, as well as initiatives in new urbanism, land use planning and transportation policies. Finally, the book looks to discuss the main issues that are likely to impact on future forms of planning in the 2020s, including digitisation, automation, sustainability and social polarisation. Urban and Regional Planning will be invaluable to undergraduate as well as postgraduate Planning students. It will prove useful in a variety of built environment areas such as Architecture, Landscape Architecture, Urban Design, Real Estate, where planning is taught.

Cities of Tomorrow Routledge

Textbook on the evolution of urban planning in a broad regional planning context in the UK - reviews urban planning trends in the UK, the USA and Western Europe, and covers urban development, new towns and urban renewal, etc. Illustrations, maps and references.

Planning Cities for the Future Routledge

This title was first published in 2000: Providing a review and assessment of a number of the major features evident in regional planning and development in Europe, this volume contains a series of regional case studies, drawn from current research in various European countries. These illustrate a broad range of theoretical views, which offer perspectives on the operation of the EU Structural Funds and regional restructuring, development and key concerns evident in spatial planning an environmental management and lessons from past experience. The editors collate views to arrive at challenging conclusions and suggestions for future policy priorities.

Urban Planning in Europe Routledge

This is the fourth edition of the classic text for students of urban and regional planning. It gives a historical overview of the developments and changes in the theory and practice of planning, throughout the entire twentieth century. This extensively revised edition follows the successful format of previous editions. Specific reference is made to the most important British developments in recent times, including the devolution of Scotland, Wales and Northern Ireland, the establishment of the Mayor of London and the dominant urban sustainability paradigm. Planning in Western Europe, since 1945, now incorporates new material on EU-wide issues as well as updated country specific sections. Planning in the United States since 1945, now discusses the continuing trends of urban dispersal and social polarisation, as well as initiatives in land use planning and transportation policies. The book looks at the nature of the planning process at the end of the twentieth century and looks forward to the twenty-first century.

Cities of Tomorrow Routledge

This book sheds light on Sir Peter Hall's visions and contributions as recalled by experts. Specialists from the fields of transport and geography testify to Sir Peter Hall's enormous impact on urban planning, urban geography, and transport geography, and The IGU Commission on Transport and Geography together with the IGU Urban Commission would like to commemorate this. After an Introduction by Richard Knowles and Celine Rozenblat,

Peter Taylor presents his high-level contribution "Polymath in City Studies," and Jonathan Reades presents Sir Peter Hall's views on "Location and Innovation." This is followed by "An Innovator of Enhancing Transport and Urban Development Relationships" by Chia-Lin Chen. Kathy Pain explains their common work on "The Mega City Regions," while Michael Batty recalls how they collaborated on "World Cities and Information Cities." Celine Rozenblat and Dan O'Donoghue welcome "The Visionary for World and European cities".

Urban Resilience Wiley-Blackwell

A new 21st century urban phenomenon is emerging: the networked polycentric mega-city region. Developed around one or more cities of global status, it is characterized by a cluster of cities and towns, physically separate but intensively networked in a complex spatial division of labour. This book describes and analyses eight such regions in North West Europe. For the first time, this work shows how businesses interrelate and communicate in geographical space - within each region, between them, and with the wider world. It goes on to demonstrate the profound consequences for spatial planning and regional development in Europe - and, by implication, other similar urban regions of the world. The Polycentric Metropolis introduces the concept of a mega-city region, analyses its characteristics, examines the issues surrounding regional identities, and discusses policy ramifications and outcomes for infrastructure, transport systems and regulation. Packed with high quality maps, case study data and written in a clear style by highly experienced authors, this will be an insightful and significant analysis suitable for professionals in urban planning and policy, environmental consultancies, business and investment communities, technical libraries, and students in urban studies, geography, economics and town/spatial planning.

Urban and Regional Planning Routledge

Urban and regional planning is a spatial design practice that brings limitations to the intervention in natural areas to ensure a balance between population growth, housing, and employment in residential areas. It includes spatial design that enables living creatures to live while planning the interventions to ensure suitability to ecology, geology, climate, and land structure since intervention in nature should be balanced. In this context, the profession generally includes regional, spatial and urban planning, urban transformation that involves the urban decline areas in the city, urban renewal and protection, urban transportation, and urban management. Therefore, it is believed that this book will be useful for those who work in this area on a practical or academic basis and follow the innovations in the profession.

Cities, Regions and Flows Routledge

Cities, Regions and Flows presents a theoretical framework for understanding the changing relationship between places and physical movement, and thoughtfully prepared case studies from five continents on how cities relate to value chains, and how they ensure accessibility and urban liveability in an increasingly contested policy environment. Moreover, the book discusses how urban policies attempt to solve related conflicts in terms of infrastructure provision, land use, local labour markets and environmental sustainability. The two subsystems that are of major interest here - urban regions on the one hand, and logistics management and physical distribution on the other - develop in quite distinct, and often contradictory, ways. Whereas urban regions face disintegration due to the expansion of the built environment and the spatio-temporal fragmentation of life-worlds and regional systems, the logistics system itself demands integration in order to keep flows moving and to reduce costs. Physical flows, networks and chains thus have a fundamental impact on urban restructuring.

An Approach to Urban Sociology Temple University Press

Global Urban Analysis provides a unique insight into the contemporary world economy through a focus on cities. It is based upon a large-scale customised data collection on how leading businesses use cities across the world: as headquarter locations, for finance, for professional and creative services, for media. These data - involving up to 2000 firms and over 500 cities - provide evidence for both how the leading cities, sometimes called global cities, are coming to dominate the world economy, and how hundreds of other cities are faring in this brave new urban world. Thus can the likes of London, New York and Hong Kong be tracked as well as Manchester, Cleveland and Guangzhou, and even Plymouth, Chattanooga and Xi'an. Cities are assessed and ranked in terms of their importance for various functions such as for financial services, legal services and advertising, plus novel findings are reported for the geographical orientations of their connections. This is truly a comprehensive survey of cities in globalization covering global, world-regional, and national scales of analysis: - 4 key chapters outline the global structure of the world economy featuring the leading cities; - 9 regional chapters covering the whole world also feature the level of services provided by 'medium' cities; - 22 chapters on selected countries and sub-regions indicate global-ness and local-ness and feature an even wider range of cities. Written in an easy to understand style, this book is a must read for anybody interested in their own city in the world and how it relates to other cities.

Sustainable Communities Edward Elgar Publishing

This classic text is a practical vision of how different types of communities can make the transition to a sustainable way of life that balances production and consumption, reduces resource waste and produces long-term social and ecological health. Our old patterns of growth are built on isolation-an isolation from the environment, an isolation between activities and ultimately an isolation between individuals. Whether city or suburb, these qualities of isolation are the same. Buildings ignore climate and place, uses are zoned into separate areas, and individuals are isolated by a lack of convivial public places. Sustainable patterns break down the separations; buildings respond to the climate rather than overpowering it, mixed uses draw activities and people together, and shared spaces reestablish community. -from Sustainable Communities

Evaluation in Planning University of Pennsylvania Press

Evaluation is a critical stage in urban and regional planning and development, with the consideration of alternative proposals essential for informed debate and decision. Evaluation in planning has become even more important with the new paradigm attempting to integrate economic efficiency with equity, sustainability and social responsibility. The craft of pre-development evaluation has long been influenced by Nathaniel Lichfield, and in his honour, this book brings together prominent researchers and practitioners to discuss evaluation in planning: its conceptual foundations and subsequent development, its strengths and persisting dilemmas, and its best practices and their potential for improving future planning and development. The chapters trace evaluation in planning from its historical origin to current applications. Part one reviews the evolution of evaluation

theory and practice, and part two contains a selection of best-practice application. The final integrating chapter notes key problems, and offers directions for future development in evaluation research and practice.

The Polycentric Metropolis Routledge

The twentieth century witnessed an unprecedented increase in the number of capital cities worldwide - in 1900 there were only about forty, but by 2000 there were more than two hundred. And this, surely, is reason enough for a book devoted to the planning and development of capital cities in the twentieth century. However, the focus here is not only on recently created capitals. Indeed, the case studies which make up the core of the book show that, while very different, the development of London or Rome presents as great a challenge to planners and politicians as the design and building of Brasília or Chandigarh. Put simply, this book sets out to explore what makes capital cities different from other cities, why their planning is unique, and why there is such variety from one city to another. Sir Peter Hall's 'Seven Types of Capital City' and Lawrence Vale's 'The Urban Design of Twentieth Century Capital Cities' provide the setting for the fifteen case studies which follow - Paris, Moscow and St Petersburg, Helsinki, London, Tokyo, Washington, Canberra, Ottawa-Hull, Brasília, New Delhi, Berlin, Rome, Chandigarh, Brussels, New York. To bring the book to a close Peter Hall looks to the future of capital cities in the twenty-first century. For anyone with an interest in urban planning and design, architectural, planning and urban history, urban geography, or simply capital cities and why they are what they are, *Planning Twentieth Century Capital Cities* will be the key source book for a long time to come.
