Perfume is part of the biblical text from Genesis through to Revelation, just as perfume pervades our modern life. Identifying the ingredients used in biblical times is difficult when information and meaning is lost in ancient languages. As expected, biblical perfumes were made from natural products but the range employed is surprisingly different from those of modern perfumes. The biblical ingredients are either defensive substances or products of decay, opening up an avenue of speculation as to why this is so. Charles Sell started his research into this area whilst working at Givaudan, the world's leading manufacturer of perfumes and flavours. The introductory chapter of this book

gives a brief outline of the history of the Bible lands, paving the way to understanding the difficulties in identifying exactly which plant sources the original authors meant. Other chapters discuss how plants make chemicals and how the sense of smell functions. The book explores the preparation, storage and uses of perfume, both sacred and secular, and compares and contrasts biblical perfumes with their modern equivalents. It recounts some interesting biblical events involving perfume ranging from courtship through seduction to prostitution and murder. The use of beautiful images from the windows of Canterbury Cathedral, where the author is a guide, illustrate some of the people and events in the biblical accounts and

enable visualization of the historical uses of perfumes. The book is aimed at a broad audience and requires no prior specialised knowledge. The subject matter will be of interest to everyone, including chemists and general scientists, historians, those interested in perfumery, those interested in religious studies, and anyone interested in exploring chemistry in the world of art and the creative professions.

Nurses are often said to be the backbone of health services, but in South Africa their profession itself is in need of care. This monograph considers the profile, image and status of nursing today and the nature and role of nursing education. A major concern is that, although

nursing still attracts many more students than there are places available, the gap between the large numbers who complete their training and the relatively small growth in the professional registers, indicates high attrition rates. The decline in the role of the public sector in the training of nurses is another worrying trend.

Introduction to Nursing Research Mosby
This practical and accessible book examines the knowledge base, skills and attitudes required for mentoring in the context of healthcare. Revised and updated to take account of the latest developments in healthcare, the text explores theories and research on mentoring by analysing their strengths and weaknesses. To complement his analytical style, Neil Gopee has introduced more interactive features to emphasise the application of theories and principles to various clinical settings.

He also draws on the most recent standards and competencies for mentors and supervisors, and examines how they can be applied in day-to-day mentoring and clinical practice activities. Key features include: - Comprehensive content - examines learning styles; different learning environments; evidence-based care; principles of assessment; the mentor's leadership; evaluation of teaching. - Practice-oriented - case studies offer links to 'real-life' and the chapters provide effective frameworks for mentoring in practice. - Interactive - activities and think points encourage the reader to explore and apply concepts to their practice and roles. - Up-to-date - firmly based on current knowledge in the field. Mentoring and Supervision in Healthcare

Flying Tips for Flightless Birds Springer
This contributed book is the first to focus on the Clinical Learning Environment and Supervision (CLES) framework. The origin instrument version of the CLES-scale has been published in Finland in 2002, and has generated wide European and International interest. The CLES network has pursued Europe-wide research. This book brings a unique perspective of students' clinical practicum in healthcare education and discusses how the national quality system can be used in the continual

development of student supervisory systems. The book first presents the theoretical and practical principles of clinical learning, then defines the challenges of clinical learning for mentorship, clinical staff and nurse teachers. This volume also offers examples of the benefits and future perspectives of the CLES framework in healthcare education. It is aimed at researchers and clinical professionals who contribute to students' clinical learning at universities and healthcare organisations. It is especially suitable as a learning tool for clinical staff mentorship training courses and master's level healthcare education studies.

This book chronicles the journeys of

educational researchers and academics who have engaged in research and development to improve teaching and learning at universities. It highlights the research evidence, approaches, and in many cases, the journey of transformation rather than prescribing certain principles of and approaches to effective instruction. In other words, it not only describes the destination, but also various pathways leading toward it. Further, it focuses on mechanisms for improving the approaches discussed, rather than simply determining whether one works better than the other. As such, novice and seasoned academics and teaching staff in higher education will benefit from this book, not just from the teaching and learning approaches it highlights, but also from the insights into

the respective journeys. The research and development methods and approaches discussed here will also appeal to researchers working in teaching and learning in higher education.

"Research methodology is a dynamic enterprise. Even after writing 10 editions of this book, we have continued to draw new material and inspiration from ground-breaking advances in research methods and in nurse researchers' use of those methods. It is thrilling to share many of those developments in this new edition. We expect that many of the new methodologic and technological enhancements will be translated into powerful evidence for nursing practice. Four years ago, we considered the 10th edition as a watershed edition of a classic textbook, having added two new chapters. We are persuaded, however, that this 11th edition is even better than the previous one. We have retained many features that made this book a classic textbook and resource, including

its focus on research as a support for evidence-based nursing, but have introduced important innovations that we hope will help to shape the future of nursing research"--

The rights of particularly vulnerable groups of women, including widows, elderly women, disabled women and "women in distress"--which includes poor women, women from marginalized population groups, and pregnant or nursing women in detention--are specifically recognized.
