Foundations for Teaching Technical Communication John Wiley & Sons

Based on 55 semi-structured in-depth interviews, this book investigates 15 high-tech engineering co-op professionals' writing experience in the workplace. It shows how the digital age has had a marked impact on the engineers' methods of communication at work, and how on-the-job writing has affected engineers' technical competence, shaped their professional

identities, challenged their views on Chinese and English writing, and hindered their success in the workplace. The book identifies three aspects of writing practice: engineers' linguistic and literacy challenges, the reasons behind these challenges, and coping strategies, which suggest that engineers are underprepared and lack necessary support in the workplace. Lastly, the study shows that engineers need to engage in technical literacy through on-the-job writing so that they can fully deal with workplace discourse and socialize with diverse professional groups. Since the sample group interviewed in this book is engineers who studied at universities

in the United States and have a foot in the world of school and work as well as knowledge of both Eastern and Western cultures, the book appeals to teachers, students, engineers and scientists who are interested in scientific and technological writing. It is also valuable for educators who prepare scientists, engineers, and technical communicators for professional roles, as well as for communication practitioners who work with engineers. /div

The 1994 High School Transcript Study (HSTS) provides the Department of Education and other policymakers with information about current course offerings and students' course-taking patterns in the nation's secondary schools. One objective was to determine changes in course offering and selection patterns

since the previous studies in 1982, 1987, and 1990. Another objective was to compare course-taking patterns to results from the National Assessment of Educational Progress (NAEP), an assessment of educational achievement nationwide. In 1994, transcripts were collected for more than 25,000 students who graduated from high school that year. These students were from 340 schools that participated in the NAEP. Information in this report documents a significant increase since 1982 in the percentage of graduates completing curricula recommended by the National Commission on Excellence in Education. As of 1994,

over 25% of high school graduates are completing programs satisfying the Commission's recommendations for college-bound graduates, and nearly one-third are completing the Commission's core curriculum. Chapters 1, 2, and 3 of this report contain highlights of the study results, descriptions of the studies from 1982 through 1994, an introduction to the tables of data, a brief description of subject taxonomy, a discussion of the comparability of samples in the studies, and directions for testing the significance of differences reported in the tables. Appendix A contains tables of study data, and Appendix B lists study codes for each

category of data.

As the world moves toward an integrated global society, it is essential for teachers to understand the potential cultural and linguistic differences present in students. Many classrooms have accidentally made themselves exclusionary through rigid instruction. Teaching strategies must be flexible to

cater to a diverse range of students. By catering to a wider range of students, the education system grows more inclusive, and a higher volume of educated citizens are produced. The Handbook of Research on Teaching Strategies for Culturally and Linguistically Diverse International Students explores the promising practices for teaching linguistically and culturally diverse international students within post-secondary educational institutions. This book presents student voice as it relates to student satisfaction and student perceptions of learning. Covering topics such as learning technology integration, student engagement, and instruction planning, it is an

essential resource for faculty of higher education, university administration, preservice teachers, academicians, and researchers.

This book embarks on an ever-expanding array of language, academic mobility, neoliberalism, and accompanying rich scholarly debates. It examines the ways in which international English language teachers in Saudi Arabia's higher education system position themselves, negotiate, interact, adjust, make sense of their classroom dynamics, and validate their senses of selves and pedagogies in their day-to-day (dis)engagement with their institutions and encounters at work. Informed by rich empirical data from a multi-year, multi-site project in addition to

other qualitative studies, the book reveals on-the-ground complexities involving speaker status, language, ethnicity, nationality, race, religion, sociocultural factors, emotion labour, work dynamic and professionalism. It promotes thinking beyond normative ideologies on marginalisation, the native and non-native speaker dichotomy, linguistic, racial, religious and ethnic (inter)relations, and translanguaging pedagogies, while also offering new material for original theorisation in multi-Englises multilingualism, local-trusting-local and the limits of negotiability. *The Dominance of English as a Language of Science* Greenwood Publishing Group

This volume focuses on how far the policies, principles and practices of foreign language teaching and learning are, or can be, informed by theoretical considerations and empirical findings from the linguistic disciplines. Part I deals with the nature of foreign language learning in general, while Part II explores issues arising from linguistic, socio-political, cultural and cognitive perspectives. Part III and IV then consider the different factors that have to be taken into account in designing the foreign language subject and the various approaches to pedagogy that have been proposed. Part V finally addresses questions concerning assessment of learner proficiency and the

evaluation of courses designed to promote it. Key features: provides a state-of-the-art description of different areas in the context of foreign language communication and learning, presents a critical appraisal of the relevance of the field, and offers solutions to everyday language-related problems with contributions from renowned experts

Writing & Speaking in Technology Professions St.

Martin's Press

This book examines a writing activity that has recently fallen into disrepute. Outlining has a bad reputation among students, even though many teachers

and textbooks still recommend the process. In part, the author argues, the medium is to blame. Paper and ink make the revision difficult. But if one uses an electronic outliner, the activity can be very helpful in developing a thoughtful and effective document, particularly one that spans many pages and deals with a complicated subject.

Outlining Goes Electronic takes an historical approach, examining the way people developed the idea of outlining, from the classical period to the present. We see that the medium in which people worked strongly shaped their assumptions, ideas, and use of outlines. In developing a theoretical model of

outlining as an activity, the author argues that a relatively new electronic tool--software that accelerates and performs the process of outlining--can give us a new perspective from which to engage previous classroom models of writing, recent writing theory, and current practice in the technical writing field.
