Art/Work in the Urban Garden IGI Global
The five-volume set LNCS 6782 - 6786 constitutes the refereed proceedings of the International Conference on Computational Science and Its Applications, ICCSA 2011, held in Santander, Spain, in June 2011. The five volumes contain papers presenting a wealth of original research results in the field of computational science, from foundational issues in computer science and mathematics to advanced applications in virtually all sciences making use of

computational techniques. The topics of the fully refereed papers are structured according to the five major conference themes: geographical analysis, urban modeling, spatial statistics; cities, technologies and planning; computational geometry and applications; computer aided modeling, simulation, and analysis; and mobile communications.

Global Perspectives in Urban Law IGI Global
The urban environment – buildings, cities and infrastructure – represents one of the most important contributors to climate change, while at the same time holding the

key to a more sustainable way of living. The transformation from traditional to sustainable systems requires interdisciplinary knowledge of the re-design, construction, operation and maintenance of the built environment. *Sustainable Urban Environments: An Ecosystem Approach* presents fundamental knowledge of the built environment. Approaching the topic from an ecosystems perspective, it shows the reader how to combine diverse practical elements into sustainable solutions for future buildings and cities. You'll learn to connect problems and solutions at different spatial scales, from urban ecology to

material, water and energy use, from urban transport to livability and health. The authors introduce and explore a variety of governance tools that support the transformation process, and show how they can help overcome institutional barriers. The book concludes with an account of promising perspectives for achieving a sustainable built environment in industrialized countries. Offering a unique overview and understanding of the most pressing challenges in the built environment, *Sustainable Urban Environments* helps the reader grasp opportunities for integration of knowledge and technologies in the

design, construction and management of the built environment. Students and practitioners who are eager to look beyond their own fields of interest will appreciate this book because of its depth and breadth of coverage.

Energy and Climate in the Urban Built Environment IGI

Global Developments in science and technology, demand-driven education and practices, climate change, the gradual decrease in natural resources, and economic constraints all combine to drive increased interest in research in architecture and urbanism at EU levels. In light of this, the EURAU conferences were initiated in 2004

to create a platform for researchers to share their own research outputs and knowledge, and to discuss problems emerging in architecture and urbanism with a view to develop solutions. This book brings together 19 selected papers delivered at the EURAU2014 Istanbul “Composite Cities” Conference, the primary aim of which was to provide a medium in which the complex relationships between urban form and urban experience could be discussed. The conference did this by examining four composite characters of today’s cities: the hybrid city, the morphed city, the fragmented city and the mutated city. The volume addresses the

importance of research on the complexity of today's cities, cities that are transforming on various levels from local to global, while also shedding light on new models of urbanism discussed together with new decision-making actors.

Contemporary Approaches in Urbanism and Heritage Studies Routledge

This open access book is the first to systematically introduce the principles of urban informatics and its application to every aspect of the city that involves its functioning, control, management, and future planning. It introduces new models and tools being developed to understand and implement these

technologies that enable cities to function more efficiently - to become 'smart' and 'sustainable'. The smart city has quickly emerged as computers have become ever smaller to the point where they can be embedded into the very fabric of the city, as well as being central to new ways in which the population can communicate and act. When cities are wired in this way, they have the potential to become sentient and responsive, generating massive streams of 'big' data in real time as well as providing immense opportunities for extracting new forms of urban data through crowdsourcing. This book offers a comprehensive review of the methods that

form the core of urban informatics from various kinds of urban remote sensing to new approaches to machine learning and statistical modelling. It provides a detailed technical introduction to the wide array of tools information scientists need to develop the key urban analytics that are fundamental to learning about the smart city, and it outlines ways in which these tools can be used to inform design and policy so that cities can become more efficient with a greater concern for environment and equity.

Re-Act. Tools for Urban Re-Activation

World Bank
Publications
Collective Urban
Planning in Research,
Teaching and Practice

This practice orientated handbook aims at all urban actors wishing to develop and realise complex urban planning concepts. It sets out a series of techniques, methods and process models that range from analytical approaches and concept strategies to the creation of participatory projects. Creative open-ended experiments have been proven as effective academic practice driven methods within applied participatory urban mediation. The book proposes a method-catalogue of immediately realisable approaches for experimental urban research as part of a design and planning procedure within education and practice. Cross-disciplinary methods and working

methods for urban planning Case studies from Berlin, Düsseldorf, Cologne, London, Madrid and Wuppertal Foreword Barbara-Ann Campbell-Lange and contributions by Theo Lorenz, Mohamed Fezazi, Alexia Radounikli and Vera San Payo de Lemos *Re-Act* Routledge 'Climate Resilient Cities: A Primer on Reducing Vulnerabilities to Disasters' provides city administrators with exactly what they need to know about the complex and compelling challenges of climate change. The book helps local governments create training, capacity building, and capital investment programs for building sustainable, resilient communities. A step-

by-step self-assessment challenges policymakers to think about the resources needed to combat natural disasters through an innovative hot spot risk and vulnerability identification tool. This primer is unique from other resources in its treatment of climate change using a dual-track approach that integrates both mitigation (lowering contributions to greenhouse gases) and adaptation (preparing for impacts of climate change) with disaster risk management. The book is relevant both to cities that are just beginning to think about climate change as well as those that already have well established policies, institutions, and strategies in place. By

providing a range of city-level examples of sound practices around the world, the book demonstrates that there are many practical actions that cities can take to build resilience to climate change and natural disasters.

Urban Informatics
Routledge

This report examines land-use trends, policies and practices in Korea, in particular in the city of Busan, through the lens of urban regeneration and citizen participation. Land-use planning is critical for the efficient and inclusive management of cities, pursuing sustainable and balanced development and improving quality of life and regional competitiveness.

Springer Science & Business Media

This open access book represents one of the key milestones of DESIGNSCAPES, an H2020 CSA (Coordination and Support Action) research project funded by the European Commission under the Call “User-driven innovation: value creation through design-enabled innovation”. The book demonstrates that adopting design allows us to embed innovation within the city so as to arrive at feasible answers to complex global challenges. In this way, innovation can become disruptive, while also sparking a dynamic of gradual change in the “urbanscape” it acts within. To explore this potential, the book

puts forward the concept of “design enabled innovation in urban environments” and examines the part that the city can play in promoting and facilitating the adoption of design among public and private sector innovators. This leads to a potential evaluation framework in which a given urbanscape is assessed both in terms of its capacity for generating innovation, and of the nature (more or less design-dependent or design-prone) of the innovative initiatives it hosts. This thread of reasoning holds many promising implications, including a possible “third way” between those who dream of an alternative economic model where revenues and growth are

sacrificed on the altar of social and environmental respect, and the supporters of the traditional market-based view, who feel it is enough to add a touch of responsibility and concern to a system that should continue rewarding the profitability of innovations.

New Urban Configurations OECD

Publishing
Software has become essential to the functioning of cities. It is deeply embedded into the systems and infrastructure of the built environment and is entrenched in the management and governance of urban societies. Software-enabled technologies and services enhance the ways in which we understand and plan cities. It even has an

effect on how we manage urban services and utilities. Code and the City explores the extent and depth of the ways in which software mediates how people work, consume, communication, travel and play. The reach of these systems is set to become even more pervasive through efforts to create smart cities: cities that employ ICTs to underpin and drive their economy and governance. Yet, despite the roll-out of software-enabled systems across all aspects of city life, the relationship between code and the city has barely been explored from a critical social science perspective. This collection of essays seeks to fill that gap, and offers an interdisciplinary

examination of the relationship between software and contemporary urbanism. This book will be of interest to those researching or studying smart cities and urban infrastructure.

Development, and Related Agencies Appropriations for 2008 Springer Science & Business Media

Urban areas have been caught up in a turbulent process of transformation over the past 50 years and changes have been rapid, with issues such as mobility, nature, water management, energy use and public space featuring prominently. In each Olympic year since 1988, the Faculty of Architecture at Delft University of Technology has held an international conference focusing on the connection between research and design, exploring the field of tension between science, technology and art. This book presents the

proceedings of the latest in this series of conferences: *New Urban Configurations*, held in Delft, the Netherlands, in October 2012 in collaboration with the European Association for Architectural Education (EAAE) and the International Seminar on Urban Form (ISUF). This edition of the conference discussed the role and critical potential of the architectural project in the transformation process of cities and territories that leads to new urban configurations. The publication contains all 140 accepted papers and a selection of the keynote lectures presented at the conference. The papers have been grouped

into five main themes: innovation in building typology; infrastructure and the city; complex urban projects; green spaces, and delta urbanism. Four of these major topics are further divided into several subtopics. This book will be of interest to everyone involved in designing, building, thinking about as well as managing the urban landscape and territory.

Handbook of Research on Urban Informatics: The Practice and Promise of the Real-Time City CRC Press

As populations have continued to grow and expand, many people have made their homes in cities around the globe. With this increase in city living, it is becoming vital to create intelligent urban

environments that efficiently support this growth and simultaneously provide friendly and progressive environments to both businesses and citizens alike. Smart Cities and Smart Spaces:

Concepts, Methodologies, Tools, and Applications is an innovative reference source that discusses social, economic, and environmental issues surrounding the evolution of smart cities. Highlighting a range of topics such as smart destinations, urban planning, and intelligent communities, this multi-volume book is designed for engineers, architects, facility managers, policymakers, academicians, and researchers interested

in expanding their knowledge on the emerging trends and topics involving smart cities.

Encyclopedia of Urban Studies Springer

Nature

Future Cities For the first time in human history, more than 50% of the world's population lives in urban regions. Cities are the largest, most complex, and most dynamic man-made systems. They are vibrant centers of cultural life and engines that drive the global economy.

Contemporary cities are environmentally, socially, and economically unsustainable. The quality of urban life is threatened by such factors as pollution, rising temperatures, limited resources,

congestion, social inequalities, aging of large sectors of the world population, poverty, informality, crime, and economic imbalances. The overall planning of future cities is a challenge that can only be faced by interdisciplinary teams combining multitudes of backgrounds and expertise. eCAADe "Education and Research in Computer Aided Architectural Design in Europe" eCAADe covers Europe, Middle East, North Africa and Western Asia and works in collaboration with the four other major international associations in the field: ACADIA , ASCAAD, CAADRIA, CAADFutures and SIGRADI. eCAADe has collaborated with these

associations to devise an exciting international journal for the field called the International Journal of Architectural Computing or short IJAC.

Holistic Approach for Decision Making Towards Designing Smart Cities Routledge

The central role of infrastructure to cities, and in particular their sustainability, is essential for proper planning and design since most energy and materials are themselves consumed by or through infrastructures.

Moreover, infrastructures of all types affect matters of economic and social equity, due to access that they provide or prevent. Sustainable Infrastructure for Cities and Societies shows

how fundamental planning, design, finance, and governance principles can be adapted for sustainable infrastructure to provide solutions to make cities significantly more sustainable. By providing a contemporary overview on infrastructure, cities, planning, economies, and sustainability, the book addresses how to plan, design, finance, and manage infrastructure in ways that reduce consumption and harmful impacts while maintaining and improving life quality. It considers the interrelationships between the economic, political, societal, and institutional frameworks, providing

an integrative approach including livability and sustainability, principles and practice, and planning and design. It further translates these approaches that professionals, policymakers, and leaders can use. This approach gives the book wide appeal for students, researchers, and practitioners hoping to build a more sustainable world.

Modeling Urban Dynamics vdf

Hochschulverlag AG

The book is a guide for students and teachers to understand the need for, the role of and the methods and techniques of freehand analytical sketching in architecture. The presentation focuses on drawing as an approach to and phase

of architectural design. The conceptual goal of this approach is to use drawing not as illustration or depiction, but as exploration. The first part of the book discusses underlying concepts of freehand sketching in design education and practice as a complement to digital technologies. The main component is a series of chapters that constitute a typology of fundamental issues in architecture and urban design; for instance, issues of "façade" are illustrated with sketch diagrams that show how façades can be explored and sketched through a series of specific questions and step-by-step procedures. In the expanded and updated edition, a new part

explores the questions and experiences of large architectural offices in applying freehand drawing in the practice of architectural design. This book is especially timely in an age in which the false conflict between "traditional vs. digital" gives way to multiple design tools, including sketching. It fosters understanding of the essential human ability to investigate the designed and the natural world through freehand drawing.

Drawn to Design

Springer

The editors are two of the most prominent researchers in this area. Both are at the Center for Urban Epidemiologic Studies. David Vlahov is particularly visible and known as the editor of

the Journal of Urban Health. Sandro Galea is very prominent for his research on urban health; in particular, research done on PTSD and children post-9/11. Thorough analysis of different populations in urban settings and specific health considerations Useful section on methods for the research audience. Applied in nature with section on prevention and interventions There are over 100 urban health centers in North America and there are no thorough, up-to-date resources. *Future Cities* IOS Press Historic Urban Landscape is a new approach to urban heritage management, promoted by UNESCO, and currently one of the most debated issues in the international

preservation community. However, few conservation practitioners have a clear understanding of what it entails, and more importantly, what it can achieve.

Examples drawn from urban heritage sites worldwide – from Timbuktu to Liverpool Richly illustrated with colour photographs Addresses key issues and best practice for urban conservation

Rethinking, Reinterpreting and Restructuring Composite Cities Cinius Yayınları

This edited volume examines strategies to make future cities more sustainable. The aim of these and other initiatives of the recent past, is to transform our cities into smarter cities. Thereby, these solutions are

determined to boost clean electricity and pollution reduction, improve the life of citizens and transform city environment and regulatory structures. As the EUs ambition is to become carbon-neutral until 2050, the outlined projects also consider fostering economy prosperity and social wellness and environmental sustainability. The greatest challenge being already built urban spaces that need to be transformed quickly and at low costs. The book will analyze future smart cities in three centric dimensions: energy and sustainable development, smart infrastructures for smart cities, social involvement and economic prosperity. With its global

approach, the volume is highly useful for professionals involved in city planning and urban ecology.

Sustainable Infrastructure for Cities and Societies

Springer Science & Business Media
This book is an intellectual discourse and a concise compendium of current research in Architecture and Urbanism. Primarily, it is a book of readings of 24 chapters. The book brings together theories, manifestos and methodologies on contemporary architecture and urbanism to raise the understanding for the future of architecture and urban planning. Overall, the book aimed to establish a bridge between theory and practice in the

built environment. Thus, it reports on the latest research findings and innovative approaches, methodologies for creating, assessing, and understanding of contemporary built environment. *Reconnecting the City* DIANE Publishing
The book deals with urban reactivation, a particular form of regeneration intervention which in addition to the physical-spatial dimension of the places also—and above all—considers the social and relational dynamics that the intervention is able to activate. In this sense, the concept of activation (or reactivation) emphasizes the act of putting something into or back into operation,

whether it concerns the material components of a container (a building or a place) or the immaterial components of a content (a need, or a

function), starting from the exploitation of opportunities that the architectural project contributes to revealing, developing and accompanying.
