This practical resource for nursing students, educators, researchers, and practitioners provides content about the conceptual models of nursing that are used as organizing frameworks for nursing practice, quality improvement projects, and research. Chapters break these abstract

models down into their core concepts and definitions. Discussions of each model provide examples of practical application so readers can employ these organizing frameworks. This is the only book to apply these models to quality improvement projects, particularly those in DNP programs and clinical agencies. For every conceptual model, diagrams, information boxes, and other visual elements clarify and reinforce information. Each chapter features applications of the conceptual models to a wide variety of examples, including nursing practice assessment and an intervention, a literature review and descriptive qualitative, instrument development,

" The editors and contributors are to be congratulated for their clear effort to bring some degree of correction to the singular emphasis on pharmacotherapy. While it is clear that pharmacotherapy has a role to play in treatment, it is equally clear that the use of relationships as therapy has an equal if not more important role to play. There are several other features of this text that commend it to the student and the nurse seeking a review or a refresher course. First, the authors have done an excellent job in noting historical context. Second, [they] have made extensive use of the current

research literature." - Grayce M. Sills, PhD, RN, FAAN Thoroughly updated to correlate with DSM 5 diagnostic descriptions and QSEN guidelines, the second edition of this highly acclaimed undergraduate psychiatric nursing text features concrete strategies for establishing interpersonal relationships as the basis not only for working with the psychiatric patient population, but as a timeless foundation for all nursing practice. The text guides students through the essential phases of self-discovery necessary to integrate interpersonal nursing theory into practice. Modules designed to foster growth in therapeutic use of self,

including the importance of boundary management, are integrated with psychodynamic and current neurobiological theories to provide sturdy theoretical underpinnings for practice. A wealth of descriptive psychiatric diagnoses, QSEN criteria, and NANDA-based care plans, case scenarios, evidence-based practice, patient and family education tips, drug summary lists, and complementary and alternative therapy approaches populate the text. The main body of the book focuses on common mental illnesses and weaves both the psychodynamic and neurobiological concepts into evidence-based

strategies for nursing interventions. Additional features such as examples of therapeutic dialogue and a "Consumer's Perspective" featuring an actual consumer's voice relating personal experience about living with a specific illness, provide further guidance in understanding and adopting a relationship-based approach to nursing. Web links facilitate quick access to additional information and NCLEX-style review questions prepare students for passing the NCLEX exam.
