Text and pop-up illustrations depict capuchins, spider monkeys, and four other kinds of monkeys engaged in typical behavior in their natural habitats.

[The Monkey Kingdom \(Species of Monkeys\) : 3rd Grade Science Series](#) National Geographic Books

Hang On, Monkey! uses simple vocabulary and fun pictures to capture the interest and help develop the skills of beginning readers. The crazy antics, humor, and fun information make this new reading experience a treat.

Too Much! Not Enough! National Geographic Children's Books Animals.

When Monkeys Laugh National Geographic Books

Different people find different things funny. Monkeys have been compared to humans in many ways, but this volume explores what makes a monkey chuckle. Readers will learn about the emotions behind a monkey's laughter. Is their panting as they

play an indication that they are having fun? Do chimpanzees laugh when they are tickled? Readers won't be able to suppress a smile as they learn all about the side-splitting sides of a monkey's emotions. Full-color photos will show monkeys at their funniest. A "Words to Know" section will help them master new vocabulary. "Further Reading" will inspire readers to learn more about animals and their emotions.

Day and Night Lerner Publishing Group

Describes the life cycle and behavior of sharks.

National Geographic Readers: Monkeys National Geographic Society

All titles in this collection are by Laura Marsh and previously copyrighted in 2014, 2012, and 2011, by the National Geographic Society.

Do Not Bring Your Dragon to the Library Lerner Publishing Group

All About books for kids are designed around the research and findings of child psychologists and teachers including Dr. Susan Rich Sheridan. This series is targeted toward early readers between ages 3 to 7. This series engages young minds with short, simple sentences and facts paired with vivid full-page images that will help to retain your child's attention as you guide

their reading. This is an educational series; they are not storybooks. "All About Monkeys" introduces your child to this amazing animal with facts such as "Young monkeys are usually considered to be adults once they are around 4-5 years old." and "Monkeys have good vision, but most monkeys can only see in black and white." and many more. The colorful, vivid and engaging photos will capture your child attention and imagination. This collection is specifically for guided reading; these books are short and factual, helping to ensure that the information can be retained with time and practice. Unlike many Early Learning Children's books such as "Pete the cat" or "The Bad Seed", All About books for kids does not introduce a story line. Instead, the series is focused on short, interesting facts that your child will remember and be able to use in conversation. Take a look inside of the book before you buy it using Amazon's "Looks inside" feature (the link is right above the book's cover image). If you purchase the 8.5"x8.5" paperback collection, we encourage you to allow your children to draw, write and scribble their thoughts in the ample space provided on each page; hand-marking is key for successful learning for children.

Sharks! National Geographic Children's Books

Monkeys, apes, gorillas, and chimps! There are so many primates for budding nature lovers to meet. Learn all about the career of a real-life National Geographic scientist as she heads into the wild to study these amazing animals. Come along with Dr. Jill Pruetz as she heads to the wilds of Africa to study chimpanzees and other primates. Through simple, accessible text in question-and-answer format and bright, friendly photography, young scientists will learn all about this exciting science career. Do all primates live in the jungle? Do primatologists live there with them? What's a primatologist's day like? Explore these questions and more!

Grab your copy NOW by clicking the buy button at the top right of the page.

Facts about the Spider Monkey Flying Start Books

In a world where we usually measure animals by human standards, prize-winning author and MacArthur Fellow Carl Safina takes us inside their lives and minds, witnessing their profound capacity for perception, thought and emotion, showing why the word "it" is often inappropriate as we discover who they really are. Weaving decades of observations of actual families of free-living creatures with new discoveries about brain functioning, Carl Safina's narrative breaches many commonly held boundaries between humans and other animals. In *Beyond Words*, readers travel the wilds of Africa to visit some of the last great elephant gatherings, then follow wolves of Yellowstone National Park sort out the aftermath of their personal tragedy, then plunge into the astonishingly peaceful society of killer whales living in waters of the Pacific Northwest. We spend quality time, too, with dogs and falcons and ravens; and consider how the human mind originated. In his wise and passionate new book, Safina delivers a graceful examination of how animals truly think and feel, which calls to question what really does—and what should—make us human.

Greedy Gus the Pirate National Geographic Books

Learn about monkeys including details regarding their behavior, families, and environment.

National Geographic Readers: Martin Luther King, Jr.

Armadillo

Describes how birds tweet and bees buzz in the daylight before entirely different creatures awaken and prowl after dark.
