Revisiting Postmodernism

JADON MALIK

Summer Springer

Revisiting Postmodernism offers an engaging, wide-ranging and highly illustrated account of postmodernism in architecture from its roots in the 1940s to its ongoing relevance today. This book invites readers to see Postmodernism in a new light: not just a style but a cultural phenomenon that embraces all areas of life and thrives on complexity and pluralism, in contrast to the strait-laced, single-style, top-down inclination of its predecessor, Modernism. While focusing on architecture, this book also explores aspects such as urban masterplanning, furniture design, art and literature. Looking at Postmodernism through the lens of examples from around the world, each chapter explores the movement in the UK on the one hand, and its international counterparts on the other, reflecting on the historical movement but also how postmodernism influences practices today. This book offers the insider's view on postmodernism by the author, a recognised pioneer in the field of postmodern architecture and a prestigious and authoritative participant in the postmodern movement.

Pupils can quickly get to grips with KS1 problem solving and reasoning by completing activities categorised by topic and question type. Fully in line with the new National Curriculum. Problem solving and reasoning have been key focuses within primary maths since the introduction of the 2014 curriculum, and the focus on 'teaching for mastery'. It is essential that all pupils have access to problem solving and reasoning activities. Some key benefits to problem solving in maths include: * Helping pupils grasp diverse mathematical concepts and understand the application of the subject * Enhancing strategic thinking * Developing transferable skills This book consists of three different types of mathematical problem solving challenges: 1. Solving mathematical problems. This involves pupils solving problems 'within' mathematics itself, recognising patterns and relationships, making conjectures and generalisations, and explaining and justifying conclusions. 2. Reasoning mathematically. This involved pupils using logical thinking to solve problems, focusing on making conjectures and generalisations, and explaining and justifying conclusions using appropriate

language. 3. Using & applying mathematics in real-world contexts. This involves pupils engaging in challenges that require them to use and apply their mathematical knowledge and skills in open-ended, real-world contexts.

The authors examine in detail the fundamentals and mathematical descriptions of the dynamics of automobiles. In this context, different levels of complexity are presented, starting with basic single-track models up to complex three-dimensional multi-body models. A particular focus is on the process of establishing mathematical models based on real cars and the validation of simulation results. The methods presented are explained in detail by means of selected application scenarios. In addition to some corrections, further application examples for standard driving maneuvers have been added for the present second edition. To take account of the increased use of driving simulators, both in research, and in industrial applications, a new section on the conception, implementation and application of driving simulators has been added.
