Viral Energy (MOVE) offers a fun and compelling narrative told through true short stories. Its message is for seekers—those intrepids who want to squeeze the lemons of life and discover their full potential. While meditating in 2007, Penelope Jean Hayes experienced the

contagious nature of energy and a phenomenon she calls “osmotic-energy-balancing.” Over the next decade, she intuited a system of creation involving seven levels of energy ascending from dense and heavy upward to enlightenment. She shares that each of us has an energetic-presence

that flows within one of these levels and that we only have access to the energies that reside there. Except that, we have the ability to move to higher strata, accessing the light energies that create more of what we truly want. MOVE reveals provocative insights into the universe; our relationships; the energetic antidote to unhappiness and the common cold; and our need to move from power-through-force to empowerment-through-creation. The Magic of

Viral Energy is eye-opening and exciting and it makes day-to-day life easier and our big dreams possible. "The Magic of Viral Energy could not be timelier, in my opinion. MOVE helps us recognize and understand ourselves. Viral energy is food for our soul—that's why it's magical." —Peter Egan, actor, *Downton Abbey*, *Unforgotten*, and *Ever Decreasing Circles*

My Hands Basic Books An entertaining and informative introduction to how ancient Egyptians practiced magic in their daily lives. In the ancient world, if you needed a

love charm, wanted to contact your dead wife, or needed the ability to fly like a bird, the magicians of Egypt were the ones who could make it happen. In *Ancient Egyptian Magic*, Christina Riggs explores how the Egyptians thought about magic, who performed it and why, and also helps readers understand why we've come to think of ancient Egypt in such a mystical way. Readers will learn how to cure scorpion bites, discover why you might want to break the legs off your stuffed

hippopotamus toy, and uncover whether mummies really can come back to life. Readers can also learn how to save a fortune on pregnancy tests—urinating on barley grains will answer that question— as well as how to use the next street parade to predict the future or ensure that an annoying neighbor gets his comeuppance. Was magic harmless fun, heartfelt hope, or something darker? Featuring demons, dream interpreters, the *Book of the Dead*, and illustrations

from tomb paintings and papyrus scrolls, Riggs breathes new life into ancient magic and uses early texts and images to illuminate the distinctions between magic, religion, and medicine.

Kids love magic. They love to see it, and they love to do it. Enter Joshua Jay, who started doing magic when he was 7 and was named champion at the World Magic Seminar (the Olympics of magic) by the time he was 16. His Big Magic for Little Hands is packed with 25 astonishing illusions for kids ages 7 and up. In other words, it's sleight of hand for the small of hand. These are tricks that require little prep time and dexterity yet are

guaranteed to deliver a big payoff. The large format, oversized ext, and black-and-white vintage-style illustrations make Big Magic particularly easy to follow and kid-friendly. Here's how to levitate your sibling several feet off a bed. Escape Houdini-like from tightly bound ropes. There are also impromptu effects that can be performed anytime, anywhere, like Spook-Key, in which an antique key mysteriously rotates in your hand. Each easy-to-perform feat is clearly

illustrated with step-by-step drawings and accompanied by insider tips. Joshua Jay is a master who guides his apprentices through every aspect of the magician's art, from the first step—taking the Magician's Oath—to how to minimize nervousness (Rule #1: Rehearse. A lot).

The Magic In Your Hands Penguin Magicians have dazzled audiences for many centuries; however, few researchers have studied

how, let alone why, most tricks work. The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena, including sensory illusions, misdirection of attention, and the appearance of mind-control and nuanced persuasion. Most studies to date have focused on either the psychological principles involved in watching and performing magic or “neuromagic” - the neural correlates of

such phenomena. Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts, the history of magic reveals that scientific discovery often charts new territories for magicians. In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic. On the one hand, magic can inform psychology, with particular benefits for the cognitive, social,

developmental, and transcultural components of behavioural science. Magicians have a large and robust set of effects that most researchers rarely exploit. Incorporating these effects into existing experimental, even clinical, paradigms paves the road to innovative trajectories in the study of human behaviour. For example, magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually

did not make. Moreover, magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab-based settings. Examining how magicians consistently influence spectators, for example, can elucidate important aspects in the study of persuasion, trust, decision-making, and even processes spanning authorship and agency. Magic thus offers a largely underused

armamentarium for the behavioural scientist and clinician. On the other hand, psychological science can advance the art of magic. The psychology of deception, a relatively understudied field, explores the intentional creation of false beliefs and how people often go wrong. Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities – perceptual, logical, emotional, and temporal – becomes all the more revealing when top-down

influences, including expectation, symbolic thinking, and framing, join the fray. Over the years, science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences. Furthermore, on occasion science leads to the creation of novel effects, or the refinement of existing ones, based on systematic methods. For example, by simulating a specific card routine using a series of computer stimuli, researchers have

decomposed the effect and reconstructed it into a more effective routine. Other magic effects depend on meaningful psychological knowledge, such as which type of information is difficult to retain or what changes capture attention. Behavioural scientists measure and study these factors. By combining analytical findings with performer intuitions, psychological science begets effective magic. Whereas science strives on parsimony and independent replication of

results, magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise

detection. This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by

highlighting the crosstalk as well as rapprochement between psychological science and the art of deception.
