**The Meaning of
Particle/prefix
Constructions in
German** Walter de
Gruyter

The Handbook of Body
Psychotherapy and
Somatic Psychology
provides a comprehensive
overview of body-
centered psychotherapies,
which stress the centrality
of the body to overcoming

psychological distress, trauma, and mental illness. Psychologists and therapists are increasingly incorporating these somatic or body-oriented therapies into their practices, making mind-body connections that enable them to provide better care for their clients. Designed as a standard text for somatic psychology courses, *The Handbook of Body Psychotherapy and Somatic Psychology* contains 100 cutting-edge essays and studies by respected professionals

from around the world on such topics as the historical roots of Body Psychotherapy; the role of the body in developmental psychology; the therapeutic relationship in Body Psychotherapy; and much more, as well as helpful case studies and essays on the use of Body Psychotherapy for specific disorders. This anthology will be indispensable for students of clinical and counseling psychology, somatic psychology, and various forms of body-based therapy (including

dance and movement therapies), and is also an essential reference work for most practicing psychotherapists, regardless of their therapeutic orientation. Contributors: Gustl Marlock, Halko Weiss, Courtenay Young, Michael Soth, Ulfried Geuter, Judyth O. Weaver, Wolf E. Büntig, Nicholas Bassal, Michael Coster Heller, Heike Langfeld, Dagmar Rellensmann, Don Hanlon Johnson, Christian Gottwald, Andreas Wehowsky, Gregory J. Johanson, David Boadella,

Lehrbuch Der

Experimental-physik

John Benjamins Publishing
This volume presents a line of original

experimental studies on the bodily self, investigating where people locate themselves in their bodies and how accurate they are at localizing their body parts. So far, it was not well known whether people locate themselves in one or more specific regions of their bodies. On the other hand, some systematic distortions in indicating bodily locations were already documented. In the present studies, participants were therefore asked to indicate their self-

locations, as well as the locations of several of their body parts, using a self-directed, first-person perspective pointing paradigm in various virtual reality (VR) setups (different head-mounted displays and a large-screen immersive display). Overall, participants were found to locate themselves mainly in the (upper) face and the (upper) torso. However, striking differences in self-localization were found when testing in different VR setups. Upon further

investigation, these differences were found to be foremost due to inaccuracies in body part localization. When taking these inaccuracies into account, differences between setups—and also with self-localization outside of VR—largely disappear. Another striking finding was that providing participants—in between pointing phases—with information about their bodies in the form of a real-time animated self-avatar, did not make them more accurate at locating their

own body parts. While manipulating their viewpoint to chest-height of their self-avatar did shift the afterwards indicated locations of their own body parts upwards, towards where they were seen on the avatar. Potential explanations for the various new findings, also from tasks outside of VR, are discussed. Taken together, this volume suggests a differential involvement of multi-sensory information processing in experienced self-location within the body and the ability to

locate body parts. Self-localization seems to be less flexible, possibly because it is strongly grounded in the 'bodily senses', while body part localization appears more adaptable to the manipulation of sensory stimuli, at least in the visual modality. Bd. Die Lehre von der Wärme Singing Dragon Aktuelles State-of-the-Art-Wissen in knapper, präziser Darstellung über alle Fragen zur psychosomatischen Medizin in der Rehabilitation. Dargestellt

werden evidenzbasierte Reha-Therapiestandards (ambulant und stationär; psychodynamisch und verhaltenstherapeutisch) sowie alle Formen der Prävention. Kästen, Tabellen und Übersichten zeigen Ihnen das Wichtigste auf einen Blick und helfen Ihnen, sich die Inhalte dauerhaft zu merken. Von den Grundlagen über multimodale Konzepte der Rehabilitation, sozialmedizinische Beurteilung, somatische Fachgebiete bis zu Schnittstellen und

Versorgungsstrukturen, Reha-Nachsorge bleiben keine Fragen offen. Das Buch beantwortet kurz und prägnant Fragen zu den Themen: das Bio-Psycho-soziale Konzept der Rehabilitation / Grundlagen / Diagnostik und Indikation in der Rehabilitation / multimodales Konzept der Rehabilitation / Prozess der psychosomatischen Rehabilitation / sozialmedizinische Beurteilung / Reha-Qualitätssicherung / Störungsbilder in der Psychosomatischen

Körpers. Junfermann Verlag GmbH
Working with babies and children is most successful when therapists have a complete understanding and overview of all appropriate treatment options, and the effects of early influences on child health and development. This book shows therapists how to consider these factors in order to work more effectively within their individual areas of expertise. Contributors from a wide range of disciplines,

including Ann Diamond Weinstein, Michael Shea, Carolyn Goh, Graham Kennedy, Matthew Appleton, David Haas, Thomas Harms, Franz Ruppert, Anita Hegerty and Kate Rosati, explore the influence of pregnancy, birth and family dynamics on the physical and mental health of babies and children. They show how these factors relate to common complaints, such as excessive and different types of crying, chronic illnesses and poor immune systems, and

behavioural and attachment issues, and how complementary approaches can be best applied to treat these issues. This book also offers helpful advice for working within multidisciplinary teams. Illustrated with case studies and including examples from current research, this book is a valuable resource for therapists from diverse disciplines.

Vorlesungen über Anthropologie, Physiologie und Diätetik, etc Daimon
The thoroughly

contemporary question of the relationship between emotion and reason was debated with such complexity by the philosophers of the 17th century that their concepts remain a source of inspiration for today's research about the emotionality of the mind. The analyses of the works of Descartes, Spinoza, Leibniz, and many other thinkers collected in this volume offer new insights into the diversity and significance of philosophical reflections about emotions during the

early modern era. A focus is placed on affective components in learning processes and the boundaries between emotions and reason.

Springer Science & Business Media
This is really two books in

one: a valuable reference resource, and a groundbreaking case study that represents a new approach to constructional semantics. It presents a detailed descriptive survey, using extensive examples collected from the Internet, of German verb constructions in which the expressions *durch* ('through'), *über* ('over'), *unter* ('under'), and *um* ('around') occur either as inseparable verb prefixes or as separable verb particles. Based on that evidence, the author

argues that the prefixed verb constructions and particle verb constructions themselves have meaning, and that this meaning involves subjective construal processes rather than objective information. The constructions prompt us to distribute focal attention according to patterns that can be articulated in terms of Talmy's notion of *perspectival modes*. Among the other topics that play an important role in the analysis are incremental themes,

reflexive trajectors, fictive motion, *multi-directional paths*, and *accusative landmarks*.
