Introducing Transformational Grammar Vikas Publishing House

This large, 2-volume work presents more than 50 authoritative articles by leading specialists on a wide variety of ancient, medieval, and modern languages and dialects of the greater Near East and Africa, from a variety of language families. The articles are concise descriptive narratives presenting the basics of the phonology of the languages and dialects, with an emphasis on the phonological processes operative in them. A major goal of the work is a definite statement on the language and/or dialect in question with regard to genetics, typology, and/or universal elements. Of interest to general linguists as well as those specializing in Afro-Asiatic languages.

Aspects of Iranian Linguistics S. Chand Publishing

The aim of the present work is to contribute to the knowledge of Balochi historical grammar. The main part of the book is a new discussion of the historical phonology of Balochi, the only comprehensive treatment of which existing so far dates from the end of the 19th century. Meanwhile, new material from a wide range of Balochi dialects and varieties has come to light. This makes it possible to distinguish between sound changes affecting the Balochi language as a whole and those that operate only in some variety; the approach to do so systematically is attempted here for the first

time. Reassessing previous treatments and comparing important related languages (chiefly New Persian, Parthian and Avestan), the book analyses the development of Old Iranian sounds to the stage of Common Balochi and the changes leading from that stage to the variants spoken today in Pakistan, Iran, Afghanistan and some other countries. The results indicate contact with other languages, specifically with Persian, as several Balochi sound changes are not such as we might expect in a North Western Iranian language. Concerning other sound changes, Balochi differs from all attested Middle Iranian languages. The predecessor of contemporary Balochi seems to have been a dialect rather similar to Parthian, but differing from it in a number of details. So the study of Balochi sound changes provides evidence for Middle Iranian dialectal variation. The diversity and intensity of contacts with neighbouring languages is also reflected in the Balochi lexicon of which selected fields are presented and discussed. The layers of loanwords show a continuing influence of Persian from the earliest times to the present day, relationships to Kurdish, Pashto and Brahui, and, particularly in the field of kinship terminology, intense contact with speakers of Modern Indic languages. The book is complemented by a morphological appendix and a comprehensive etymological index. It is intended as a contribution in the fields of New Iranian languages and historical Iranian linguistics.

Poetry. Latino/Latina Studies. LGBT Studies. "Like Whitman, Quesada is a poet of motion—journeying to the center of the US, where the traditions and innovations of first-generation Americans traverse the meditative starbursts of hills; ford rivers; cross prairies; and seek out 'the alpenglow of tomorrow and tomorrow.' From Costa Rica to Los Angeles and across the continent, Quesada's poems chronicle one family's history: from the courtship of his parents to their separation, from his childhood struggles to awakening desire from his mother's lottery winnings to his own personal losses, Ruben Quesada carries us toward 'that seam in space' where dream and experience intersect. This isn't the story of what it means to come to this country. It's the story of what it means to belong here"—D. A. Powell.

The Iranian languages form the major eastern branch of the Indo-European group of languages, itself part of the larger Indo-Iranian family. Estimated to have between 150 and 200 million native speakers, the Iranian languages constitute one of the world's major language families. This comprehensive volume offers a detailed overview of the principle languages which make up this group: Old Iranian, Middle Iranian, and New Iranian. The Iranian Languages is divided into fifteen chapters. The introductory chapters by the editor present a general overview and a detailed discussion of the linguistic typology of Iranian. The individual chapters which follow are written by leading experts in the field. These provide the reader with concise, non-technical descriptions of a range of Iranian languages. Each chapter follows the same pattern and sequence of topics, taking the reader through the significant features not only of phonology and morphology but also of syntax; from phrase level to complex sentences and pragmatics. Ample examples on all levels are provided with detailed annotation for the non-specialist reader. In addition, each chapter covers lexis, sociolinguistic and typological issues, and concludes with annotated sample texts. This unique resource is the ideal companion for undergraduate and postgraduate students of linguistics and language. It will also be of interest to researchers or anyone with an interest in historical linguistics, linguistics anthropology and language development. Gernot Windfuhr is Professor of Iranian Studies at the University of Michigan; he has published widely on Persian and Iranian languages and linguistics and related languages, as well as on other aspects of Iranian culture including Persian literature and Pre-Islamic Iranian religions.

The first edition of this book quickly established itself as one of the clearest and most readable introductions to generative grammar. Together with a complete introduction to the principles of Universal Grammar, it traced the major shifts of perspective that have influenced the developments of the theory over the last forty years. This revised and expanded new edition introduces students with no previous training to Transformational Grammar. Covering the framework known as Principles and Parameters as well as the more recent framework known as Minimalism, it includes a range of new exercises, making it ideal for students at all levels.

Do you wonder how movies – sequences of static frames – appear to move, or why 3-D films look different from traditional movies? Why does ventriloquism work, and why can airliner flights make you feel disoriented? The answers to these and other questions about the human senses can be found within the pages of Foundations of Sensation and Perception. This third edition maintains the standard for clarity and accessibility combined with rigor which was set in previous editions, making it suitable for a wide range of students. As in the previous editions, the early chapters allow students to grasp fundamental principles in relation to the relatively simple sensory systems (smell, taste, touch and balance) before moving on to more complex material in hearing and vision. The text has been extensively updated, and this new edition includes: a new chapter devoted to attention and perception over 200 new references over 30 new figures and improved, more colorful, visual presentation a new companion website with a range of resources for students and lecturers The book contains a range of pedagogical features, including tutorial sections at the end of each chapter. This distinctive feature introduces areas of the subject which are rarely included in student texts, but are crucial for establishing a firm foundation of knowledge. Some tutorials are devoted to more advanced and technical topics (optics, light measurement, Bayesian inference), but treated in an accessible manner, while others cover topics a little outside of the mainstream (music perception, consciousness, visual art). Foundations of Sensation and Perception will enable the reader to achieve a firm grasp of current knowledge concerning the processes that underlie our perception of the world and will be an invaluable resource for those studying psychology, neuroscience, and related disciplines.

Aspects of Iranian Linguistics introduces readers to recent research into various properties of a number of Iranian languages. The volume consists of twenty chapters that cover a full range of Iranian linguistics, including formal theoretical perspectives (from a syntactic and morphological point of view), typological and functional perspectives, and diachronic and areal perspectives. It also contains papers on computational linguistics and neurolinguistics, as well as the modern history of lexicography in Iran. Various Iranian languages are discussed in this volume, including Hawrami and Kermanji, two of the major dialects of Kurdish, Medieval, Classical and Modern Persian, Balochi, Taleshi and Pamir. With the exception of Persian, other Iranian languages had not received much attention in the past. Thus this work, as the first volume ever published on various aspects of these languages and their linguistic properties, is a valuable contribution to our understanding of a less commonly studied language family. The theoretical, descriptive, and applied approaches pursued by various authors in this volume, together with the colorful range of languages discussed, provide a unique perspective that is appealing to researchers in different domains of linguistics and language studies.
