grades can be challenging for busy teachers faced with growing demands and limited resources. Robert Prigo provides fun and engaging activities using safe, available materials that educators can easily incorporate into lesson plans. Extensive examples, sample inquiry questions, and ideas for initiating units are readily available for teachers to pick and choose from to meet student needs. The result of more than two decades of professional development work with hundreds of teachers and administrators, this resource addresses specific areas of physical science, including motion and force, waves and sound, light and electromagnetic

- Address the "big ideas" in K-8 science education
- Promote student understanding with ready-to-use learning experiences
- Use hands-on activities to help students make larger, real-world connections

Although the average college student spends only between 15 and 18 hours in class in any given week, increasing the amount of free time, there is a correlating increase in the workload. Many college students never learned effective study habits in high school and believe they will be able to make it through college just as easily. However, college and university professors and administrators claim that studying is directly connected to a student's ultimate success or failure. By reading *101 Ways to Make Studying Easier and Faster for College Students*, you

can improve the effectiveness of your studying. After all, effectiveness is not measured by the length of time spent studying or blankly staring at a textbook but by the level of comprehension. In this new book, you will learn how to make a study schedule, how to design an effective study environment, how to read for comprehension, how to get organized, how to find your learning style, how to take notes during lectures, how to listen better in class, how to use reference sources, how to boost your concentration, how to stay motivated, how to review and edit your notes, and how to increase reading comprehension. You will learn effective note

taking strategies, where to study, when to study, time management skills, strategies for reading novels and text books, memorization techniques, and organizational skills. Additionally, you will find out how to stay awake while studying, how to change your current habits, and how to make studying more enjoyable. We will provide you with various studying methods, including flashcards, quizzes, summarizing, outlining, answering study guide questions, and the proven SQ3R method, as well as exercises to help improve your skills. Furthermore, *101 Ways to Make Studying Easier and Faster for College Students* is full of tips from students just like

you, as well as professors. No two people learn the same way, and no one study method will work for everyone. While this book introduces you to different study methods, the aim is to improve your learning, your understanding, and, ultimately, your grades. Textbooks are symbols of centuries-old education. They're often outdated as soon as they hit students' desks. Acting "by the textbook" implies compliance and a lack of creativity. It's time to ditch those textbooks--and those

textbook assumptions about learning In *Ditch That Textbook*, teacher and blogger Matt Miller encourages educators to throw out meaningless, pedestrian teaching and learning practices. He empowers them to evolve and improve on old, standard, teaching methods. *Ditch That Textbook* is a support system, toolbox, and manifesto to help educators free their teaching and revolutionize their classrooms.

Practical Exercises, Worksheets, Brain Games and Fun Activities that Nurture Children's Developing Mind Do you want the tools to teach your child quickly, completely, and effectively? Keep reading! As a teacher of eleven years and mother of four children, I've been where you are and am where you want to be. I started teaching fresh out of college, and I loved it. Having my first child was wonderful too, but it was completely different. Toddlerhood was newer yet.

Preschool brought new challenges. I thought I had this "schooling" thing licked, but then we reached the Kindergarten stage, and everything changed again. Now your time has come. Your child has reached Kindergarten -- a turning-point in life. You've been teaching your toddler and preschooler all his life, making learning important and readying him for this point. You've asked yourself and answered many questions: Should I send him to public school, private school, a charter school, or just keep him home? Did I teach him the right things? Did I teach him enough? Is he ready to leave me? Am I ready to let him go? Now things are changing. His style of learning is

changing. His skills, the way he comprehends, how much he can absorb and recall later has changed. Now that he's officially a "big kid", the best way to approach his schooling is different. You start to ask yourself some more questions: What Does My Kindergartener Need to Learn? How Does a 5-Year-Old Learn? How Do I Teach My Kindergartener? What If My Child Isn't Learning? We'll learn all this in this Introduction Chapters, Learning about Learning. In the activity section of the book, I'll present activities for your child to complete, but that's not the extent of it. Not only are they arranged by increasing difficulty, but before each activity, I'll explain:

How to complete the activity, How it's relevant to a Kindergartener's learning, and What skill(s) your child will develop because of it. I'll also give you a list of ideas of other mental or physical activities you and your child can do together along with each activity to advance the skills they'll learn. Later, at the conclusion of the book, we'll discuss: When to See a Doctor about Autism signs in a chapter titled Act Early! Plus, I'll give you a BIG BONUS - a list of links to more educational resources! You might be thinking, "But I can't teach my kid, I never finished High School," or, "I have no idea how to teach. I'd ruin her!" You don't need any special education to

teach your child! All your child needs is you and your love. Let my book do the rest. Everything you need to know is written inside. The simple-to-read descriptions will explain how to do the activities, how to apply them, and what else you can do to help further develop the skill that activity is developing. Welcome to the KINDERGARTEN SCHOLASTIC WORKBOOK where you and your child can learn together - you into the teacher that you want to be and that your child needs, and him into an A+ student.

Wild parties, late
nights, and lots of sex,
drugs, and alcohol.
Many assume these
are the things that
define an American
teenager's first year
after high school. But
the reality is really
quite different. As Tim
Clydesdale reports in
The First Year Out,
teenagers generally
manage the increased
responsibilities of
everyday life
immediately after

graduation effectively. But, like many good things, this comes at a cost. Tracking the daily lives of fifty young people making the transition to life after high school, Clydesdale reveals how teens settle into manageable patterns of substance use and sexual activity; how they meet the requirements of postsecondary education; and how they cope with new financial expectations. Most of them, we learn, handle the changes well because they make a priority of everyday life. But Clydesdale finds that teens also stow away their identities—religious, racial, political, or otherwise—during this period in exchange for acceptance into mainstream culture.

This results in the absence of a long-range purpose for their lives and imposes limits on their desire to understand national politics and global issues, sometimes even affecting the ability to reconstruct their lives when tragedies occur. The First Year Out is an invaluable resource for anyone caught up in the storm and stress of working with these young adults.

 The story of human evolution, or Our Story, is about the development and refinement of cultures. Individuals cannot do things on their own,

this book argues; their choices are driven by heuristics, biases, illogical preferences, and irrational assumptions about the nature of reality. So how did humanity survive? By forming more and more successful cultures, which are teams of people who share a specific vision of the world. Because cultures-as-teams are more effective if there is a strong correspondence among the members, they select individuals who clarify the team's vision and force compliance to that vision. Thus, cultures-as-teams are powerful agents for change in the world. They offer the individual the opportunity to accomplish unimaginable goals,

but they can also destroy him or her in the process.

Traditionally, the study of entrepreneurial behavior focuses on such factors as (i) the personality characteristics that distinguish the entrepreneur from non-

entrepreneur and (ii) demographic characteristics such as gender, age, familiar antecedents and education. With particular respect to investigating the development, acquisition, and dissemination of entrepreneurial skills and behaviors, the authors focus on the university environment, as a locus of research and innovation, where students are exposed to a wide variety of influences that are enhanced by a high degree of connectivity. The underlying theme of this volume is to develop our understanding of the sociology of student entrepreneurial behavior and in doing so attempt to synthesize literature

investigating individual talent with the literature on concurrent knowledge sourcing in the pursuit of entrepreneurial activities. Specifically, the authors investigate the degree to which access to diverse knowledge (in addition to such psychological characteristics and tolerance of ambiguity and risk taking) influences the nature and probability of entrepreneurial success. Moreover, they explore the role of social media and social networking in facilitating access to distributed and disparate information and knowledge. Their research addresses such timely questions as: Where do entrepreneurial opportunities come from? How can higher

education best stimulate the creation of firms emanating from young and smart minds in colleges and universities? What is the value of MOOCs for frequent, early, and “thick” communication among the various specialties needed to accomplish entrepreneurial projects? How do we know whether social media affect students’ responses to new knowledge and new ideas? To what extent do educational practices affect racial and ethnic differences in student entrepreneurship? What is the role of the indigenous minority student entrepreneur in establishing high-technology firms? The result is a multi-dimensional approach that sheds light on the

dynamics of education, knowledge creation, social networking, innovation and new business development.
