Designed for aspiring school leaders, this text presents the realities of school finance policy and issues, as well as the tools for formulating and managing school budgets. In an era of dwindling fiscal support for public schools, increasing federal mandates, and additional local budget requirements, educational leaders must be able to articulate sound finance theory and application. The authors move beyond coverage found in other texts by providing critical analysis and unique chapters on misconceptions about school finance; fiscal capacity, fiscal effort, adequacy, and efficiency; demographic issues; and spending and

student achievement. Examining local, state, and federal education spending, this text gives readers the foundation to understand school finance and knowledgeably educate colleagues, parents, and other stakeholders about its big-picture issues, facts, and trends. The new edition of *American Public School Finance* will help educational leaders at all stages of their careers become informed advocates for education finance practice and reform. New in this edition: Expanded coverage on school choice Discussion of new standards and law Updated exploration of student demographics and its impact on learning Advanced pedagogical features such as connections to the latest Professional Standards for Educational Leaders (PSEL), Focus Questions, Case Studies, and Chapter Questions/Assignments Complementary electronic resources designed to deepen and extend the topics in each chapter and to provide instructors with lecture slides and other teaching strategies.

How does a building boom happen? Who inflates a real-estate bubble and why? What causes companies to move from seemingly usable office space into new quarters only blocks away? Rachel Weber digs into these questions and more in her detailed analysis of Chicago's downtown development during the "Millennial Boom" (1998-2008). Weber shows what happens when the real estate industry, financial markets, and public planning all operate at warp speed to build new structures and destroy older ones. She draws on years of interviews with real estate actors across the country, participant observation in a secretive sector, analyses of financial and development data, as well as the history of the appraisal, brokerage, and real estate finance professions. As a result, Weber's book is an unprecedented historical, sociological, and geographic look at how markets and urban change actually happen.

The Nine Years' War with France was a period of great institutional innovation in public finance and of severe monetary turmoil for England. It saw the creation of the Bank of England; a sudden sharp fall in the external value of the pound; a massive undertaking to melt down and recoin most of the nation's silver currency; a failed attempt to create a National Land Bank as a competitor to the Bank of England; and the ensuing outbreak of a sharp monetary and financial crisis. Histories of this period usually divide these events into two main topics, treated in isolation from one another: the recoinage debate and ensuing monetary crisis and a 'battle of the banks'. The first is often interpreted as the pyrrhic victory of a creditor-dominated parliament over the nation's debtors, one that led very predictably to the ensuing monetary crisis. The second has been construed as a contest between whig-merchant and tory-gentry visions of the proper place of banking in England's future. This book binds the two strands into a single narrative, resulting in a very different interpretation of both. Parliamentary debate over the recoinage was superficial and misleading; beneath the surface, it was just another front for the battle of the banks. And the latter had little to do with competing philosophies of economic development; it was rather a pragmatic struggle for profit and power, involving interlocking contests between two groups of financiers and two sets of politicians within the royal administration. The monetary crisis of summer 1696 was not the result of poor planning by the Treasury; rather it was a continuation of the battle of the banks, fought on new ground but with the same ultimate intent - to establish dominance in the lucrative business of private lending to the crown.

A guide to advances in machine learning for financial professionals, with working Python code Key Features Explore advances in machine learning and how to put them to work in financial industries Clear explanation and expert discussion of how machine learning works, with an emphasis on financial applications Deep coverage of advanced machine learning approaches including neural networks, GANs, and reinforcement learning Book Description *Machine Learning for Finance* explores new advances in machine learning and shows how they can be applied across the financial sector, including in insurance, transactions, and lending. It explains the concepts and algorithms behind the main machine learning techniques and provides example Python code for implementing the models yourself. The book is based on Jannes Klaas' experience of running machine learning training courses for financial professionals. Rather than providing ready-made financial algorithms, the book focuses on the advanced ML concepts and ideas that can be applied in a wide variety of ways. The book shows how machine learning works on structured data, text, images, and time series. It includes coverage of generative adversarial learning, reinforcement learning, debugging, and launching machine learning products. It discusses how to fight bias in machine learning and ends with an exploration of Bayesian inference and probabilistic programming. What you will learn Apply machine learning to structured data, natural language, photographs, and written text How machine learning can detect fraud, forecast financial trends, analyze customer sentiments, and more Implement heuristic baselines, time series, generative models, and reinforcement learning in Python, scikit-learn, Keras, and TensorFlow Dig deep into neural networks, examine uses of GANs and reinforcement learning Debug machine learning applications and prepare them for launch Address bias and privacy concerns in machine learning Who this book is for This book is ideal for readers who understand math and Python, and want to adopt machine learning in financial applications. The book assumes college-level knowledge of math and statistics.

Directed both at students of international finance and practitioners in the field, the book stresses the importance of treating the analysis of sovereign risk in a more general framework than is typically the case, identifying the components of both the demand and supply of sovereign loans. The author also discusses the link between the unique aspects of sovereign lending, the interdependence of the international banking system and the potential instability in the world financial system.

Most financial and investment decisions are based on considerations of possible future changes and require forecasts on the evolution of the financial world. Time series and processes are the natural tools for describing the dynamic behavior of financial data, leading to the required forecasts. This book presents a survey of the empirical properties of financial time series, their descriptions by means of mathematical processes, and some implications for important financial applications used in many areas like risk evaluation, option pricing or portfolio construction. The statistical tools used to extract information from raw data are introduced. Extensive multiscale empirical statistics provide a solid benchmark of stylized facts (heteroskedasticity, long memory, fat-tails, leverage...), in order to assess various mathematical structures that can capture the observed regularities. The author introduces a broad range of processes and evaluates them systematically against the benchmark, summarizing the successes and limitations of these models from an empirical point of view. The outcome is that only multiscale ARCH processes with long memory, discrete multiplicative structures and non-normal innovations are able to capture correctly the empirical properties. In particular, only a discrete time series framework allows to capture all the stylized facts in a process, whereas the stochastic calculus used in the continuum limit is too constraining. The present volume offers various applications and extensions for this class of processes including high-frequency volatility estimators, market risk evaluation, covariance estimation and multivariate extensions of the processes. The book discusses many practical implications and is addressed to practitioners and quants in the financial industry, as well as to academics, including graduate (Master or PhD level) students. The prerequisites are basic statistics and some elementary financial mathematics.

Sous la monarchie de Juillet affaiblie par de multiples tensions, les crises politiques, économiques et commerciales suscitent un sentiment de défiance générale et une paralysie du crédit. Particulièrement touchée au moment de son expansion, la librairie parisienne connaît une profonde mutation qui se manifeste par une série de faillites au caractère paradoxal. Cette situation donne lieu à une mobilisation importante des acteurs du liure en quête de solutions : en 1847, le Cercle de la Librairie est créé, tandis que le Sous-comptoir d'escompte de la librairie voit le jour l'année suivante. Autrement dit, l'ensemble des structures financières de ce secteur s'en trouve transformé. En s'appuyant sur différents corpus de sources (dossiers de faillites et de brevets, Bottins du commerce, archives de la Banque de France...), cette étude prosopographique rend visible un espace professionnel hiérarchisé dans ses dimensions géographiques et économiques. Elle met en évidence les liens de solidarité comme de dépendance entre gens du liure et gens de finance.

The International Handbook of Shipping Finance is a one-stop resource, offering comprehensive reference to theory and practice in the area of shipping finance. In the multibillion dollar international shipping industry, it is important to understand the various issues involved in the finance of the sector. This involves the identification and evaluation of the alternative sources of capital available for financing the ships, including the appraisal and budgeting of shipping investment projects; legal and insurance aspects of ship finance; the financial analysis and modelling of investment projects; mergers and acquisitions; and the commercial and market risk management issues involved. Edited by two leading academics in this area, and with contributions from 25 prominent market practitioners and academics over 16 chapters, this Handbook covers shipping finance and banking, maritime financial management and investments. As such, it includes: shipping markets; asset backed finance; shipbuilding finance; debt finance; public and private equity and debt markets; structured finance; legal aspects and key clauses of ship mortgages; marine insurance; mechanisms for handling defaulted loans; investment appraisal and capital budgeting; financial analysis and investment modelling; business risk management and freight derivatives; and mergers and acquisitions. Thus, the Handbook offers a rigorous understanding of the different aspects of modern shipping finance and maritime financial management and investments, the various characteristics of the available products, the capital needs and requirements, and a clear view on the different financial management strategies through a series of practical examples and applications. Technical where appropriate, but grounded in market reality, this is a "must-have" reference for anyone involved in shipping finance, from bank practitioners and commodity trading houses, to shipbrokers, lawyers and insurance houses as well as to university students studying shipping finance.
