Modern Combat Pistols provides a comprehensive account of the development of military and police semi-automatic pistols and their ammunition from 1945 to present day. It follows on from the same authors critically acclaimed Assault Rifle [Crowood 2004]. The first part of the book looks at defensive and offensive pistols, the difference between military and police pistols, and special-purpose weapons such as silenced and underwater pistols. The history of the handgun before 1945 is described, and there is an examination both of the development of the semi-automatic pistol since 1945 and of future trends in pistol design. The second part of the book is divided up on a country-by-country basis. Each countrys section starts with a historical overview of pistol development in that country before giving a description and technical data for each individual weapon. Appendices cover technical aspects of semi-automatic and ammunition design.

In a hard-hitting novel about fitting in—or not—Anthony “Ant” Jones gets transported from his East Cleveland hood to an almost all-white prep school and has to figure out where he belongs...before he loses himself entirely. Black Boy White School is a memorable debut that will appeal to fans of Walter Dean Myers and Sherman Alexie. Anthony has never been outside his rough neighborhood when he receives a scholarship to Belton Academy, an elite prep school in Maine. But at Belton things are far from perfect. Everyone calls him “Tony,” assumes he’s from Brooklyn, expects him to play basketball, and yet acts shocked when he fights back. As Anthony tries to adapt to a world that will never fully accept him, he’s in for a rude awakening: Home is becoming a place where he no longer belongs. In debut author Brian F. Walker’s honest and dynamic novel about staying true to yourself, Anthony might find a way to survive at Belton, but what will it cost him?

This book brings together aspects of statistics and machine learning to provide a comprehensive guide to evaluating, interpreting and understanding biometric data. It naturally leads to topics including data mining and prediction to be examined in detail. The book places an emphasis on the various performance measures available for biometric systems, what they mean, and when they should and should not be applied. The evaluation techniques are presented rigorously, however they are always accompanied by intuitive explanations. This is important for the increased acceptance of biometrics among non-technical decision makers, and ultimately the general public.

Although the Assyrian kingdom that dominated the Ancient Near East between the ninth and seventh centuries BC had a rich material culture, attested particularly by the distinctive stone wall reliefs and colossal gateway figures, practically nothing is known about Assyrian metalwork. There has been no previous survey of this subject, largely because most of the material was not accessible. This volume makes available for the first time a vast amount of previously unpublished metalwork, much of it from the Assyrian capital city of Nimrud, excavated first by Sir Henry Layard between 1845 and 1851 and then by the British School of Archaeology in Iraq between 1949 and 1963. It emerges that Assyria had a thriving metalworking industry probably superior to any contemporary state in the region, and was producing large quantities of sophisticated bronze and ironwork, of high technical quality and sometimes elaborately decorated. This book will therefore be of interest to archaeologists, art historians and metallurgists. It is the publication of a PhD thesis that was successfully submitted in 1979. It is published here in its original form in order to make the large amount of primary data that it contains available to a wider circle of scholars.
