"A stunning book."—Oliver Sacks Memory binds our mental life together. We are who we are in large part because of what we learn and remember. But how does the brain create memories? Nobel Prize winner Eric R. Kandel intertwines the intellectual history of the powerful new science of the mind—a combination of cognitive psychology, neuroscience, and molecular biology—with his own personal quest to understand memory. A deft mixture of memoir and history, modern biology and behavior, *In Search of Memory* brings readers from Kandel's childhood in Nazi-occupied Vienna to the forefront of one of the great scientific endeavors of the twentieth century: the search for the biological basis of memory.

Our understanding of nature's deepest reality has changed radically, but almost without our noticing, over the past twenty-five years. Transcending the clash of older ideas about matter and space, acclaimed physicist Frank Wilczek explains a remarkable new discovery: matter is built from almost weightless units, and pure energy is the ultimate source of mass. He calls it "The Lightness of Being." Space is no mere container, empty and passive. It is a dynamic Grid—a modern ether—and its spontaneous activity creates and destroys particles. This new understanding of mass explains the puzzling feebleness of gravity, and a gorgeous unification of all the forces comes sharply into focus. The Lightness of Being is the first book to explore the implications of these revolutionary ideas about mass, energy, and the nature of "empty space." In it, Wilczek masterfully presents new perspectives on our incredible universe and envisions a new golden age of fundamental physics.

Moon Palace Where's Wally

Emotional Intelligence was an international phenomenon, appearing on the New York Times bestseller list for over a year and selling more than five million copies worldwide. Now, once again, Daniel Goleman has written a groundbreaking synthesis of the latest findings in biology and brain science, revealing that we are “wired to connect” and the surprisingly deep impact of our relationships on every aspect of our lives. Far more than we are consciously aware, our daily encounters with parents, spouses, bosses, and even strangers shape our brains and affect cells throughout our bodies—down to the level of our genes—for good or ill. In *Social Intelligence*, Daniel Goleman explores an emerging new science with startling implications for our interpersonal world. Its most fundamental discovery: we are designed for sociability, constantly engaged in a “neural ballet” that connects us brain to brain with those around us. Our reactions to others, and theirs to us, have a far-reaching biological impact, sending out cascades of hormones that regulate everything from our hearts to our immune systems, making good relationships act like vitamins—and bad relationships like poisons. We can “catch” other people’s emotions the way we catch a cold, and the consequences of isolation or relentless social stress can be life-shortening. Goleman explains the surprising accuracy of first impressions, the basis of charisma and emotional power, the complexity of sexual attraction, and how we detect lies. He describes the “dark side” of social intelligence, from narcissism to Machiavellianism and psychopathy. He also reveals our astonishing capacity for “mindsight,” as well as the tragedy of those, like autistic children, whose mindsight is impaired. Is there a way to raise our children to be happy? What is the basis of a nourishing marriage? How can business leaders and teachers inspire the best in those they lead and teach? How can groups

divided by prejudice and hatred come to live together in peace? The answers to these questions may not be as elusive as we once thought. And Goleman delivers his most heartening news with powerful conviction: we humans have a built-in bias toward empathy, cooperation, and altruism—provided we develop the social intelligence to nurture these capacities in ourselves and others.
