This book is open access under a CC BY 4.0 license. This volume shares new data relating to Climate-Smart Agriculture (CSA), with emphasis on experiences in Eastern and Southern Africa. The book is a collection of research by authors from over 30 institutions, spanning the public and private sectors, with specific knowledge on agricultural development in the region discussed. The material is assembled to answer key questions on the following five topic areas: (1) Climate impacts: What are the most significant current and near future climate risks undermining smallholder livelihoods? (2) Varieties: How can climate-smart varieties be delivered quickly and cost-effectively to smallholders? (3) Farm management: What are key lessons on the contributions from soil and water management to climate risk reduction and how should interventions be prioritized? (4) Value chains: How can climate risks to supply and value chains be reduced? and (5) Scaling up: How can most promising climate risks reduction strategies be quickly scaled up and what are critical success factors? Readers who will be interested in this book include students, policy makers, and researchers studying climate change impacts on agriculture and agricultural sustainability.

Integrity in Government through Records Management Routledge

This book argues that intellectual property (IP) management development and innovation are fundamental to economic development, especially in newly emerging economies which often hold vast reserves of natural resources and human knowledge that remain unprotected. It sheds light on countries that are gradually realising this situation, with examples from many parts of the world, including Eastern Europe, Africa and especially Asia including India, where a great deal is being made of innovation and intellectual property to stimulate economic growth. These case studies are seen within the theoretical context of the future of cross-border IP which is slowly becoming a reality. Specific examples go beyond the patent prosecution highway, to which China has also recently signed up, and India's development of generic drugs at lower costs. Experts in the field including practising IP lawyers explain and criticise current and new models being tested in emerging economies concerning IPR. Original case studies of hitherto little understood breaches of African trademarks by the US and Japan, and patenting mistakes in relation to little known Indian forest plants all damage emerging economies and their native people's lives. While proper implementation of IP laws by emerging economies themselves can lead to positive outcomes for all involved, the key is an independent judiciary coupled by thoughtful and thoroughly understood implementation of IP laws within the context of cross border IP. The book shows through models how different emerging economies are at various levels of developing their IPR and what paths they are taking to do this. Finally, it provides a comprehensive assessment of the ways in which innovation, protection and enforcement of IP laws can help newly emerging economies achieve economic growth without destroying natural and human resources, while moving ahead from the current global financial crisis.

Master's Thesis from the year 2016 in the subject Business economics - Personnel and Organisation, , course: MASTER OF PHILOSOPHY IN HUMAN RESOURCE DEVELOPMENT, language:

English, abstract: A communication system links together the constituent parts of an organization and provides for the creation, distribution, interpretation and execution of instructions. The purpose of the study was to investigate employees' perception of the effectiveness of communication patterns used in organizations, establish employee use, evaluating and rating of the known patterns of communication, and how the known patterns are effective in service delivery. This study was guided by the kite orientation model (1973), which focuses on interpersonal communication on communication that is two-way and emphasizes on the dynamics of communication situations. Related literature on this model, Human Resource Management and relationship between communication patterns and Human Resource Management was reviewed. Survey research design was used and was carried out at Kenya Seed Company. There are over 300 employees from the departments of Human Resource, Public Relations, research and development, auditing and field, Marketing and Finance. Out of this, a sample of 180 which represented 60% from the whole population was selected using purposive and stratified sampling. Data was collected using questionnaires, observation and interview schedules. The data collected was then classified, presented, analyzed and interpreted through descriptive statistical techniques. The data was presented in the form of percentages and frequency tables. The findings were that employees perceived the use of communication patterns as ineffective, and the study further suggested that organizations should put in place structures that will improve communication between employees and management. The findings of the study will be useful to management of Kenya Seed Company as information will be provided as a benchmark to evaluate its communication patterns to enhance effectiveness in service delivery. The study will serve as an additional reference material for scholars interested in exploring the communication patterns as a broad aspect in the world and specifically in such organizations as Kenya Seed Company.

African Seed Enterprises CIMMYT

This open access book describes recent innovations in food systems based on root, tuber and banana crops in developing countries. These innovations respond to many of the challenges facing these vital crops, linked to their vegetative seed and bulky and perishable produce. The innovations create value, food, jobs and new sources of income while improving the wellbeing and quality of life of their users. Women are often key players in the production, processing and marketing of roots, tubers and bananas, so successful innovation needs to consider gender. These crops and their value chains have long been neglected by research and development, hence this book contributes to filling in the gap. The book features many outcomes of the CGIAR Research Program in Roots, Tubers and Banana (RTB), which operated from 2012-21, encompassing many tropical countries, academic and industry partners, multiple crops, and major initiatives. It describes the successful innovation model developed by RTB that brings together diverse partners and organizations, to create value for the end users and to generate positive economic and social outcomes. RTB has accelerated the scaling of innovations to reach many end users cost effectively. Though most of the book's examples and insights are from Africa, they can be applied worldwide. The book will be useful for decision makers designing policies to scale up agricultural solutions, for researchers and extension specialists seeking practical ideas, and for scholars of innovation.

As a celebration of Anne Thurston's pioneering work on records and archives management as an essential basis for demonstrating integrity in government, this excellent volume brings together scholars and practicing archivists to discuss key issues around records as evidence for accountability, transparency and the protection of citizens' rights. Never before have authors from the developing and developed worlds come together to explore the intersection of records management, public administration and international development. The book covers Thurston's work, the importance of records management for effective governance and digital records management and preservation in developing countries. Case studies from across Africa enhance the theoretical and practical perspectives taken by the authors. This book is essential reading for scholars and students interested in records management and good governance around the world.

Due to such factors as poor economic conditions, climate change, and conflict, food security remains an issue around the world and especially in developing nations. Rapid changes in technology over the last decade has brought a renewed focus on how information and communication technologies (ICTs) and application systems are deployed to improve rural competitiveness. Unfortunately, agricultural stakeholders in developing countries, particularly in Africa, have not been able to reap comparable benefits from adopting agricultural information systems as compared to their counterparts in the developed economies. Understanding the challenges that hinder the effective adoption of agricultural information systems and identifying opportunities or innovations is imperative to improve

the agricultural sectors and overcome the problems in these developing economies. *Opportunities and Strategic Use of Agribusiness Information Systems* is an essential reference book that examines the key challenges that hinder the effective adoption of agricultural information systems. Moreover, it identifies and evaluates opportunities for the strategic deployment of ICTs and information systems to drive agricultural development for the benefit of agricultural sector stakeholders in emerging countries. While highlighting such topics as agricultural entrepreneurship, food value chain, and innovation systems, it is intended to provide sound and relevant frameworks and tools that will aid agricultural industry practitioners, smallholder farmers, and managers of agricultural extension systems looking to make more effective and responsible decisions when selecting, planning, deploying, and managing agribusiness information systems. It is additionally targeted for agricultural funding organizations, government policymakers, academicians, researchers, and students concerned with exploiting the potential of a variety of ICTs and information systems in the quest to achieve food security and poverty reduction in emerging economies.

The Report: Kenya 2014 Springer Nature

Incidence and intensity of drought and low N stresses in the tropics; Case studies strategies for crop production under drought and low n stresses in the tropics; Stress physiology and identification of secondary traits; Physiology of low nitrogen stress; Breeding for tolerance to drought and low n stresses; General breeding strategies for stress tolerance; Progress in breeding drought tolerance; Progress in breeding low nitrogen tolerance; Experimental design and software.

Wither Farmers' Rights? CRC Press

"The economies of most African countries rely heavily on agriculture and other land and land-based activities such as tourism, mining and livestock production. Indeed, these are the core activities through which African countries participate in the global economy. Moreover, land is key to food security and the

social-cultural needs of most communities in Africa. It has also been established that the performance of most sectors of the economies of African countries is indeed tied to that of the land sector. The management of this sector must therefore be accorded priority attention in all countries in order to unlock the overall performance of national economies. This is best done through comprehensive land policies developed to address all the cross-sectoral needs and the unique circumstances in each of the countries. It is in response to this challenge that the African Union(AU), the African Development Bank(AfDB) and the Economic Commission for Africa(ECA) embarked on an exercise to develop a continental framework to guide land policy formulation and implementation in AU member States. However, the effective formulation and implementation of land policies can only be best done in circumstances where all the land information necessary is availed in a suitable, timely and up-to-date form to enable expedient decision-making by the policy planners in each of the sectors." -- provided by publisher.

Kenya Business Law Handbook Volume 1 Strategic Information and Basic Laws Lulu.com

Through the integration of gender analysis into resilience thinking, this book shares field-based research insights from a collaborative, integrated project aimed at improving food security in subsistence and smallholder agricultural systems. The scope of

the book is both local and multi-scalar. The gendered resilience framework, illustrated here with detailed case studies from semi-arid Kenya, is shown to be suitable for use in analysis in other geographic regions and across disciplines. The book examines the importance of gender equity to the strengthening of socio-ecological resilience. Case studies reflect multidisciplinary perspectives and focus on a range of issues, from microfinance to informal seed systems. The book's gender perspective also incorporates consideration of age or generational relations and cultural dimensions in order to embrace the complexity of existing socio-economic realities in rural farming communities. The issue of succession of farmland has become a general concern, both to farmers and to researchers focused on building resilient farming systems. Building resilience here is shown to involve strengthening households' and communities' overall livelihood capabilities in the face of ongoing climate change, global market volatility and political instability.

Enterprise resource planning (ERP) is a class of integrated software that uses software technologies to implement real-time management of business processes in an organization. ERPs normally cut across organizations, making them large and complex. Software researchers have for many years established that complexity affects software quality negatively and must therefore be controlled with novel metrics and models of evaluation that can determine when the software is at acceptable levels of quality and when not. Metrics and Models for Evaluating the Quality and Effectiveness of ERP Software is a critical scholarly publication that examines ERP development, performance, and challenges in business settings to help improve decision making in organizations that have embraced ERPs, improve the efficiency and effectiveness of their activities, and improve their return on investments (ROI). Highlighting a wide range of topics such as data mining, higher education, and security, this book is essential for professionals, software developers, researchers, academicians, and security professionals.
