From one of the world's most renowned cave divers, a firsthand account of exploring the earth's final frontier: the hidden depths of our oceans and the sunken caves inside our planet More

people have died exploring underwater caves than climbing Mount Everest, and we know more about deep space than we do about the depths of our oceans. From one of the top cave divers working today—and one of the very few women in her field—Into the Planet blends science, adventure, and memoir to bring readers face-to-face with the terror and beauty of earth's remaining unknowns and the extremes of human capability. Jill Heinerth—the first person in history to dive deep into an Antarctic iceberg and leader of a team that discovered the ancient watery remains of Mayan civilizations—has descended farther into the inner depths of our planet than any other woman. She takes us into the harrowing split-second decisions that determine whether a diver makes it back to safety, the prejudices that prevent

women from pursuing careers underwater, and her endeavor to recover a fallen friend's body from the confines of a cave. But there's beauty beyond the danger of diving, and while Heinerth swims beneath our feet in the lifeblood of our planet, she works with biologists discovering new species, physicists tracking climate change, and hydrogeologists examining our finite freshwater reserves. Written with hair-raising intensity, Into the Planet is the first book to deliver an intimate account of cave diving, transporting readers deep into inner space, where fear must be reconciled and a mission's success balances between knowing one's limits and pushing the envelope of human endurance.

When All Hell Breaks Loose Springer Nature

In 1954, in a remote mountain village in

South America, a little girl was abducted. She was four years old. Marina Chapman was stolen from her housing estate and abandoned deep in the Colombian jungle. That she survived is a miracle. Two days later, half-drugged, terrified, and starving, she came upon a troop of capuchin monkeys. Acting entirely on instinct, she tried to do what they did: copying their actions she slowly learned to fend for herself. So begins the story of her five years among the monkeys, during which time she gradually became feral; lost the ability to speak, lost all inhibition, lost any sense of being human, replacing human society with the social mores her new simian family. But society was eventually to reclaim her. At age ten she was discovered by a pair of hunters who took her to the lawless Colombian city of Cucuta where, in exchange for a parrot, they sold her to a brothel. When she learned that she was to be groomed for prostitution, she made her plans to escape. But her adventure was not over yet... In the vein of *Slumdog Millionaire* and *City of God*, this rousing story of a lost child who overcomes the dangers of the wild to finally reclaim her life will astonish readers everywhere.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

This report examines the links between inequality and other major global trends (or megatrends), with a focus on technological change, climate change, urbanization and international migration. The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major trends selected. It also provides policy recommendations to manage these megatrends in an equitable manner and considers the policy implications, so as to reduce inequalities and support their implementation.

NATIONAL BESTSELLER • At once an incredible adventure narrative and a penetrating biographical portrait—the bestselling author of *Destiny of the Republic* brings us the true story of Theodore Roosevelt's harrowing exploration of one of the most dangerous rivers on earth. The River of Doubt—it is a black, uncharted tributary of the Amazon that snakes through one of the most treacherous jungles in the world. Indians armed with poison-tipped arrows haunt its shadows; piranhas glide through its waters; boulder-strewn rapids turn the river into a roiling cauldron. After his humiliating election defeat in 1912, Roosevelt set his sights on the most punishing physical challenge he could find,

the first descent of an unmapped, rapids-choked tributary of the Amazon. Together with his son Kermit and Brazil's most famous explorer, Cândido Mariano da Silva Rondon, Roosevelt accomplished a feat so great that many at the time refused to believe it. In the process, he changed the map of the western hemisphere forever. Along the way, Roosevelt and his men faced an unbelievable series of hardships, losing their canoes and supplies to punishing whitewater rapids, and enduring starvation, Indian attack, disease, drowning, and a murder within their own ranks. Three men died, and Roosevelt was brought to the brink of suicide. The River of Doubt brings alive these extraordinary events in a powerful nonfiction narrative thriller that happens to feature one of the most famous Americans who ever lived. From the soaring beauty of the Amazon rain forest to the darkest night of Theodore Roosevelt's life, here is Candice Millard's dazzling debut.

The basic goal of the volume is to compile the most up to date research on how high altitude affects the behavior, ecology, evolution and conservation status of primates, especially in comparison to lowland populations. Historically, the majority of primate studies have focused on lowland populations. However, as the lowlands have been disappearing, more and more primatologists have begun studying populations located in higher altitudes. High altitude populations are important not only because of their uniqueness, but also because they highlight the range of primate adaptability and the complex variables that are involved in primate evolution. These populations are good examples of how geographic scales result in diversification and/or speciation. Yet, there have been very few papers addressing how this high altitude environment affects the behavior, ecology, and conservation status of these primates.

Many visitors to Yellowstone National Park don't realize that the boiling hot springs and spraying geysers are caused by an underlying supervolcano, so large that the caldera can only be seen by plane or satellite. And by some scientific measurements, it could be overdue for an eruption. For Alex, being left alone for the weekend means having the freedom to play computer games and hang out with his friends without hassle from his mother.

Then the Yellowstone supervolcano erupts, plunging his hometown into a nightmare of darkness, ash, and violence. Alex begins a harrowing trek to search for his family and finds help in Darla, a travel partner he meets along the way. Together they must find the strength and skills to survive and outlast an epic disaster.

Communities in Action National Geographic Books

In this "hypnotic, violent, unsparing" (A.J. Banner, USA TODAY bestselling author) thriller from the author of the "haunting, twisting thrill ride" (Megan Miranda, New York Times bestselling author) *The River at Night*, a young woman leaves behind everything she knows to take on the Bolivian jungle, but her excursion abroad quickly turns into a fight for her life. Lily Bushwold thought she'd found the antidote to endless foster care and group homes: a gig teaching English in Cochabamba, Bolivia. As soon as she could steal enough cash for the plane, she was on it. But the program was a scam. And bonding with other broke, rudderless girls in the local youth hostel wasn't the answer. Falling crazy in love with Omar, a savvy, handsome local who'd left his life as a hunter in Ayachero—a remote jungle village—to try city life: this was the last thing Lily could have imagined. When Omar learns that a jaguar had killed his four-year-old nephew in Ayachero, he gives Lily a choice: stay alone in the unforgiving city, or travel to the last in the ever-more-isolated string of river towns in the jungles of Bolivia. Thirty-foot anacondas? Puppy-sized spiders? Vengeful shamans with unspeakable powers? None of it matters to love-struck Lily. She follows Omar to a ruthless new world of lawless poachers, bullheaded missionaries, and desperate indigenous tribes driven to the brink of extinction. To survive, Lily must navigate the jungle—and all its residents—using only her wits and resilience. "Gripping, breathtaking, and exquisitely told—Into the Jungle pulls you into another world, returning you forever transformed" (Wendy Walker, USA TODAY bestselling author).

This book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals -- especially those that are endangered. His message: to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits: from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the prose of veteran wildlife writer Douglas Chadwick, this book presents an argument for saving all the species of our planet.

A survival expert's guide for every family to prepare and educate themselves about the skills and mentality necessary to survive a disaster anywhere. This is not your father's scout manual or a sterile FEMA handout. Entertaining and informative, *When All Hell Breaks Loose* describes how to maximize a survival mindset necessary for self-reliance. According to the book, living through an emergency scenario is 90 percent psychology, and 10 percent methodology and gear. Relevant quotes and tips are placed throughout the pages to help readers remember important survival strategies while under stress and anxiety. Lundin also addresses basic first aid and hygiene skills and makes recommendations for survival kit items for the home, office, and car. Watch naturalist Cody Lundin in *Dual Survival* on The Discovery Channel as he uses many of the same skills and techniques taught in his books. *When All Hell Breaks Loose* provides solutions on how to survive a catastrophe. Lundin addresses topics such as: · Potable drinking water · Storing super-nutritious foods · Heating or cooling without conventional power · How to create alternative lighting options ·

Building a makeshift toilet & composting the results · Catching rodents for food · Safely disposing of a corpse "The essential survival guide for the twenty-first century."—Jim Mulvaney, Pulitzer Prize-winning journalist

Climate change issues are attracting rapidly increasing interest from a wide range of biologists due to their unprecedented effects on global biodiversity, although there remains a lack of general knowledge as to the environmental consequences of such rapid change. Compared with any other class of animals, birds provide more long-term data and extensive time series, a more geographically and taxonomically diverse source of information, a richer source of data on a greater range of topics dealing with the effects of climate change, and a longer tradition of extensive research. The first edition of the book was widely cited and this new edition continues to provide an exhaustive and up-to-date synthesis of our rapidly expanding level of knowledge as it relates to birds, highlighting new methods and areas for future research. *Night of the Grizzlies* National Geographic Kids

For more than half a century, grizzly bears roamed free in the national parks without causing a human fatality. Then in 1967, on a single August night, two campers were fatally mauled by enraged bears -- thus signaling the beginning of the end for America's greatest remaining land carnivore. *Night of the Grizzlies*, Olsen's brilliant account of another sad chapter in America's vanishing frontier, traces the causes of that tragic night: the rangers' careless disregard of established safety precautions and persistent warnings by seasoned campers that some of the bears were acting "funny"; the comforting belief that the great bears were not really dangerous -- would attack only when provoked. The popular sport that summer was to lure the bears with spotlights and leftover scraps -- in hopes of providing the tourists with a show, a close look at the great "teddy bears." Everyone came, some of the younger campers even making bold

enough to sleep right in the path of the grizzlies' known route of arrival. This modern "bearbaiting" could have but one tragic result...
